(54) Title: AMIDINOPHENYL-PYRROLIDINES, -PYRROLINES, AND -ISOXAZOLIDINES AND DERIVATIVES THEREOF

(57) Abstract

The present application describes amidinophenyl-pyrrolidines, -pyrrolines, and -isoxazolidines and derivatives thereof of formula (I), or pharmaceutically acceptable salt forms thereof, wherein one of D and D' may be C(=NH)NH₂ and the other H and J¹ and J² may be O or CH₂, which are useful as inhibitors of factor Xa.

TITLEAmidinophenyl-Pyrrolidines, -Pyrrolines, and -Isoxazolidines
and Derivatives Thereof

5

FIELD OF THE INVENTION

This invention relates generally to amidinophenyl pyrrolidines, -pyrrolines, and -isoxazolidines and derivatives which are inhibitors of trypsin-like serine 10 protease enzymes, especially factor Xa, pharmaceutical compositions containing the same, and methods of using the same as anticoagulant agents for treatment and prevention of thromboembolic disorders.

15

BACKGROUND OF THE INVENTION

Himmelsbach et al in CA 2,054,850 discuss aggregation inhibiting compounds of the formula:

wherein A may be a cyclic imino such as pyrrolidine and 20 amidst the various definitions of B and X one can find amidino and arylene listed. The combination of Y-E, however, is not considered to be useful for the present invention. Thus, the compounds of Himmelsbach et al differ from those of the present invention. Moreover, inhibition 25 of factor Xa is not discussed in Himmelsbach et al as a use for the compounds of the above formula.

In U.S. Patent No. 5,463,071, Himmelsbach et al depict cell aggregation inhibitors which are 5-membered heterocycles of the formula:

30

wherein the heterocycle is other than pyrroline and pyrrolidine and groups A-B-C- and F-E-D- are attached to the ring system. A-B-C- can be a wide variety of substituents 35 including a basic group attached to an aromatic ring. The F-E-D- group, however, would appear to be an acidic functionality which differs from the present invention.

Furthermore, use of these compounds as inhibitors of factor Xa is not discussed.

Activated factor Xa, whose major practical role is the generation of thrombin by the limited proteolysis of 5 prothrombin, holds a central position that links the intrinsic and extrinsic activation mechanisms in the final common pathway of blood coagulation. The generation of thrombin, the final serine protease in the pathway to generate a fibrin clot, from its precursor is amplified by 10 formation of prothrombinase complex (factor Xa, factor V, Ca^{2+} and phospholipid). Since it is calculated that one molecule of factor Xa can generate 138 molecules of thrombin (Elodi, S., Varadi, K.: *Optimization of conditions for the catalytic effect of the factor IXa-factor VIII Complex: 15 Probable role of the complex in the amplification of blood coagulation. Thromb. Res.* 1979, 15, 617-629), inhibition of factor Xa may be more efficient than inactivation of thrombin in interrupting the blood coagulation system.

Therefore, efficacious and specific inhibitors of 20 factor Xa are needed as potentially valuable therapeutic agents for the treatment of thromboembolic disorders. It is thus desirable to discover new factor Xa inhibitors.

SUMMARY OF THE INVENTION

25 Accordingly, one object of the present invention is to provide novel amidino-phenylpyrrolidines and analogs thereof which are useful as factor Xa inhibitors or pharmaceutically acceptable salts or prodrugs thereof.

It is another object of the present invention to 30 provide pharmaceutical compositions comprising a pharmaceutically acceptable carrier and a therapeutically effective amount of at least one of the compounds of the present invention or a pharmaceutically acceptable salt or prodrug form thereof.

35 It is another object of the present invention to provide a method for treating thromboembolic disorders comprising administering to a host in need of such treatment a therapeutically effective amount of at least one of the

compounds of the present invention or a pharmaceutically acceptable salt or prodrug form thereof.

These and other objects, which will become apparent during the following detailed description, have been 5 achieved by the inventors' discovery that compounds of formula (I):

I

10 or pharmaceutically acceptable salt or prodrug forms thereof, wherein A, B, D, D^a, J, m, n, R, R^a, R^b and Z are defined below, are effective factor Xa inhibitors.

DETAILED DESCRIPTION OF PREFERRED EMBODIMENTS

15 [1] Thus, in a first embodiment, the present invention provides novel compounds of formula I:

I

20 or a stereoisomer or pharmaceutically acceptable salt form thereof, wherein;

one of D and D' is selected from CN, C(=NR^7)NR^8R^9, NHC(=NR^7)NR^8R^9, NR^8CH(=NR^7), C(O)NR^8R^9, and (CH2)tNR^8R^9
25 and the other is H;

2 is selected from CH_2 , $\text{C}=\text{O}$, $\text{CH}_2\text{C}(\text{O})$, $\text{C}(\text{O})\text{O}$, CONH , CH_2NH_2 , CH_2O , SO_2 , and SO_2NH ;

5 J^1 and J^2 are independently selected from O and CH_2 , provided that if J^1 is O , then J^2 is CH_2 and if J^2 is O , then J^1 is CH_2 ;

10 R is selected from CO_2R^1 , COR^1 , OR^1 , NR^2R^{2a} , $\text{CONR}^2\text{R}^{2a}$, $\text{S}(\text{O})_p\text{R}^{1a}$, and $\text{S}(\text{O})_p\text{NR}^2\text{R}^{2a}$;

15 R^a is selected from H and C_{1-4} alkyl;

20 R^b is H ;

25 when J^1 and J^2 are CH_2 , then R^a and R^b can combine to form a bond;

30 R^1 is selected from:

35 H ,

C_{1-4} alkyl substituted with 0-1 R^3 , C_{3-6} carbocyclic residue substituted with 0-2 R^4 , and 5-6 membered heterocyclic system containing from 1-4 heteroatoms selected from the group consisting of N , O , and S substituted with 0-2 R^4 ;

40

R^{1a} is selected from:

45 C_{1-4} alkyl substituted with 0-1 R^3 ,

50 C_{3-6} carbocyclic residue substituted with 0-2 R^4 , and

55 5-6 membered heterocyclic system containing from 1-4

60 heteroatoms selected from the group consisting of N , O , and S substituted with 0-2 R^4 ;

65 R^2 and R^{2a} are independently selected from H , C_{1-4} alkyl, and phenyl;

70

75 R^2 and R^{2a} may be taken together to form a 5 or 6 membered ring substituted with 0-2 R^4 which may contain from 0-1

heteroatoms selected from the group consisting of N, O, and S;

R^{2a} may also be C₁₋₄ alkoxy;

5

R³ is selected from:

phenyl substituted with 0-2 R⁴, and

5-6 membered heterocyclic system containing from 1-4 heteroatoms selected from the group consisting of N, O, and S substituted with 0-2 R⁴;

10

A is selected from:

C₃₋₁₃ carbocyclic residue substituted with 0-2 R⁴, and

5-10 membered heterocyclic system containing from 1-4 heteroatoms selected from the group consisting of N, O, and S substituted with 0-2 R⁴;

15

B is selected from:

X-Y, NR²R^{2a}, C(=NR²)NR²R^{2a}, NR²C(=NR²)NR²R^{2a},

20

benzyl substituted with 0-2 R^{4a},

C₃₋₁₀ carbocyclic residue substituted with 0-2 R^{4a}, and
5-10 membered heterocyclic system containing from 1-4 heteroatoms selected from the group consisting of N, O, and S substituted with 0-2 R⁴, provided that B is other than
25 tetrazol-5-yl;

30

X is selected from C₁₋₄ alkylene, -C(O)-, -C(O)CR²R^{2a}-, -CR²R^{2a}C(O), -S(O)_p-, -S(O)_pCR²R^{2a}-, -CR²R^{2a}S(O)_p-, -S(O)₂NR²-, -NR²S(O)₂-, -NR²S(O)₂CR²R^{2a}-, -CR²R^{2a}S(O)₂NR²-, -NR²S(O)₂NR²-, -C(O)NR²-, -NR²C(O)-, -C(O)NR²CR²R^{2a}-, -NR²C(O)CR²R^{2a}-, -CR²R^{2a}C(O)NR²-, -CR²R^{2a}NR²C(O)-, -NR²C(O)O-, -OC(O)NR²-, -NR²C(O)NR²-, -NR²-, -NR²CR²R^{2a}-, -CR²R^{2a}NR²-, O, -CR²R^{2a}O-, -OCR²R^{2a}-, and S;

35

Y is selected from:

C₃₋₁₀ carbocyclic residue substituted with 0-2 R⁴, and

5-10 membered heterocyclic system containing from 1-4 heteroatoms selected from the group consisting of N, O, and S substituted with 0-2 R⁴, provided that Y is other than tetrazol-5-yl;

5

R⁴ is selected from OH, (CH₂)_rOR², halo, C₁₋₄ alkyl, CN, NO₂, (CH₂)_rNR²R^{2a}, (CH₂)_rC(O)R², NR²C(O)R^{2a}, NR²C(O)NR²R^{2a}, CH(=NH)NH₂, NHC(=NH)NH₂, SO₂NR²R^{2a}, NR²SO₂NR²R^{2a}, NR²SO₂-C₁₋₄ alkyl, NR²SO₂R⁵, S(O)_pR^{1a}, and CF₃;

10

R^{4a} is selected from OH, halo, C₁₋₄ alkyl, NO₂, (CH₂)_rNR²R^{2a}, (CH₂)_rC(O)R², NR²C(O)R^{2a}, NR²C(O)NR²R^{2a}, CH(=NH)NH₂, NHC(=NH)NH₂, SO₂NR²R^{2a}, NR²SO₂NR²R^{2a}, NR²SO₂-C₁₋₄ alkyl, NR²SO₂R⁵, S(O)_pR^{1a}, and CF₃;

15

R⁵ is selected from:
C₃₋₁₀ carbocyclic residue substituted with 0-2 R⁶, and
5-10 membered heterocyclic system containing from 1-4 heteroatoms selected from the group consisting of N, O, and S substituted with 0-2 R⁶;

R⁶ is selected from H, OH, (CH₂)_rOR², halo, C₁₋₄ alkyl, CN, NO₂, (CH₂)_rNR²R^{2a}, (CH₂)_rC(O)R², NR²C(O)R^{2a}, NR²C(O)NR²R^{2a}, CH(=NH)NH₂, NHC(=NH)NH₂, SO₂NR²R^{2a}, NR²SO₂NR²R^{2a}, and NR²SO₂C₁₋₄ alkyl;

R⁷ is selected from H, OH, C₁₋₆ alkyl, C₁₋₆ alkylcarbonyl, C₁₋₆ alkoxy, C₁₋₄ alkoxy carbonyl, C₆₋₁₀ aryloxy, C₆₋₁₀ aryloxycarbonyl, C₆₋₁₀ arylmethylcarbonyl, C₁₋₄ alkylcarbonyloxy C₁₋₄ alkoxy carbonyl, C₆₋₁₀ arylcarbonyloxy C₁₋₄ alkoxy carbonyl, C₁₋₆ alkylaminocarbonyl, phenylaminocarbonyl, and phenyl C₁₋₄ alkoxy carbonyl;

35 R⁸ is selected from H, C₁₋₆ alkyl and (CH₂)_n-phenyl;

R⁹ is selected from H, C₁₋₆ alkyl and (CH₂)_n-phenyl;

n is selected from 0, 1, 2, and 3;

m is selected from 0, 1, and 2;

5 p is selected from 0, 1, and 2; and,

r is selected from 0, 1, and 2;

provided that if B is tetrazolyl, R⁴ is present.

10

[2] In a preferred embodiment, the present invention provides novel compounds of formula Ia:

15

Ia

or a stereoisomer or pharmaceutically acceptable salt form thereof, wherein;

Z is selected from CH₂, C=O, C(O)O, and SO₂.

20

[3] In a more preferred embodiment, the present invention provides compounds of formula Ia wherein;

25 one of D and D' is C(=NR⁷)NH₂ and the other is H;

B is selected from:

X-Y, NR²R^{2a},

benzyl substituted with 0-2 R^{4a},

30 C₃-10 carbocyclic residue substituted with 0-2 R^{4a}, and 5-10 membered heterocyclic system containing from 1-4 heteroatoms selected from the group consisting of N, O, and

S substituted with 0-2 R⁴, provided that B is other than tetrazol-5-yl;

X is selected from C₁₋₄ alkylene, -C(O)-, -C(O)CR²R^{2a}-, 5 -CR²R^{2a}C(O), -S(O)_p-, -S(O)_pCR²R^{2a}-, -CR²R^{2a}S(O)_p-, -S(O)₂NR²-, -NR²S(O)₂-, -C(O)NR²-, -NR²C(O)-, -NR²-, -NR²CR²R^{2a}-, -CR²R^{2a}NR²-, O, -CR²R^{2a}O-, and -OCR²R^{2a}-,

R⁴ is selected from OH, (CH₂)_rOR², halo, C₁₋₄ alkyl, CN, NO₂, 10 (CH₂)_rNR²R^{2a}, (CH₂)_rC(O)R², NR²C(O)R^{2a}, NR²C(O)NR²R^{2a}, CH(=NH)NH₂, NHC(=NH)NH₂, SO₂NR²R^{2a}, NR²SO₂NR²R^{2a}, NR²SO₂-C₁₋₄ alkyl, S(O)_pR^{1a}, and CF₃;

R^{4a} is selected from OH, halo, C₁₋₄ alkyl, NO₂, (CH₂)_rNR²R^{2a}, 15 (CH₂)_rC(O)R², NR²C(O)R^{2a}, NR²C(O)NR²R^{2a}, CH(=NH)NH₂, NHC(=NH)NH₂, SO₂NR²R^{2a}, NR²SO₂NR²R^{2a}, NR²SO₂-C₁₋₄ alkyl, S(O)_pR^{1a}, and CF₃; and,

n is selected from 0 and 1. 20
 [4] In an even more preferred embodiment, the present invention provides compounds of formula II:

II

25 or a stereoisomer or pharmaceutically acceptable salt form thereof, wherein;

R is selected from CO₂R¹, COR¹, OR¹, CONR²R^{2a}, S(O)_pR^{1a}, and 30 S(O)_pNR²R^{2a};

R¹ and R^{1a} are independently selected from:

C₁₋₄ alkyl substituted with 0-1 R³,
C₃₋₆ carbocyclic residue substituted with 0-2 R⁴, and
5 5-6 membered heterocyclic system containing from 1-4
heteroatoms selected from the group consisting of N, O,
and S substituted with 0-2 R⁴;

X is selected from C₁₋₄ alkylene, -C(O)-, -S(O)_p-, -NR²-, and
O; and,

10 m is selected from 0 and 1.

[5] In a further preferred embodiment, the present invention provides compounds of formula II wherein;

15 R is selected from CO₂R¹, COR¹, OR¹, and CONR²R^{2a};

R¹ and R^{1a} are independently selected from:

C₁₋₄ alkyl substituted with 0-1 R³, and

C₃₋₆ carbocyclic residue substituted with 0-2 R⁴; and,

20 R² and R^{2a} may be taken together to form a 5 or 6 membered ring substituted with 0-2 R⁴.

[6] In a still further preferred embodiment, the present invention provides compounds of formula II wherein;

R^a is selected from H and C₁₋₄ alkyl;

30 R¹ and R^{1a} are independently selected from C₁₋₄ alkyl substituted with 0-1 R³;

R³ is phenyl substituted with 0-2 R⁴; and,

Y is a C₃₋₁₀ carbocyclic residue substituted with 0-2 R⁴.

35 [7] Specifically preferred compounds of this invention are compounds, or pharmaceutically acceptable salt forms thereof, selected from the group consisting of:

5 *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine;

10 (3*S*,4*R*)-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine;

15 (3*R*,4*S*)-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine;

20 *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-(3-amidinophenyl)pyrrolidin-3-ylcarboxylic acid

25 *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-(3-amidinophenyl)pyrrolidin-3-ylcarboxylic amide

30 *cis*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine;

35 *cis*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-(3-amidinophenyl)pyrrolidin-3-ylcarboxylic acid

40 *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-carboisopropoxy-4-(3-amidinophenyl)pyrrolidine;

45 *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-carbobutoxy-4-(3-amidinophenyl)pyrrolidine;

50 *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-acetyl-4-(3-amidinophenyl)pyrrolidine;

trans-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-carboethoxy-3-methyl-4-(3-amidinophenyl)pyrrolidine;

5 *trans*-1-[(2-(2-cyanophenylthio)phenyl)carbonyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine;

10 *trans*-1-[(2-(2-cyanophenylthio)phenyl)methyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine;

15 *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)sulfonyl]-3-carboisopropoxy-4-(3-amidinophenyl)pyrrolidine;

20 *trans*-1-[9-fluorenylmethoxycarbonyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine;

25 *trans*-2-benzyl-4-carbomethoxy-5-(3-amidinophenyl)isoxazolidine;

20 *trans*-2-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-carbomethoxy-5-(3-amidinophenyl)isoxazolidine;

25 *trans*-2-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-carboisopropoxy-5-(3-amidinophenyl)isoxazolidine; and,

30 *trans*-2-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-methoxymethyl-5-(3-amidinophenyl)isoxazolidine.

30 [8] In another preferred embodiment, the present invention provides novel compounds of formula Ib:

Ib

or a stereoisomer or pharmaceutically acceptable salt form thereof, wherein:

5

[9] In another more preferred embodiment, the present invention provides compounds of formula Ib wherein;

10

one of D and D' is $C(=NR^7)NH_2$ and the other is H;

15

B is selected from:

$X-Y$, NR^2R^{2a} ,

benzyl substituted with 0-2 R^{4a} ,

C_{3-10} carbocyclic residue substituted with 0-2 R^{4a} , and

20

5-10 membered heterocyclic system containing from 1-4 heteroatoms selected from the group consisting of N, O, and S substituted with 0-2 R^4 , provided that B is other than tetrazol-5-yl;

25

X is selected from C_{1-4} alkylene, $-C(O)-$, $-C(O)CR^2R^{2a}-$, $-CR^2R^{2a}C(O)$, $-S(O)_p-$, $-S(O)_pCR^2R^{2a}-$, $-CR^2R^{2a}S(O)_p-$, $-S(O)_2NR^2-$, $-NR^2S(O)_2-$, $-C(O)NR^2-$, $-NR^2C(O)-$, $-NR^2-$, $-NR^2CR^2R^{2a}-$, $-CR^2R^{2a}NR^2-$, O, $-CR^2R^{2a}O-$, and $-OCR^2R^{2a}-$;

30

R^4 is selected from OH, $(CH_2)_rOR^2$, halo, C_{1-4} alkyl, CN, NO_2 , $(CH_2)_rNR^2R^{2a}$, $(CH_2)_rC(O)R^2$, $NR^2C(O)R^{2a}$, $NR^2C(O)NR^2R^{2a}$, $CH(=NH)NH_2$, $NHC(=NH)NH_2$, $SO_2NR^2R^{2a}$, $NR^2SO_2NR^2R^{2a}$, NR^2SO_2- C_{1-4} alkyl, $S(O)_pR^{1a}$, and CF_3 ;

R^{4a} is selected from OH, halo, C_{1-4} alkyl, NO_2 , $(CH_2)_rNR^2R^{2a}$, $(CH_2)_rC(O)R^2$, $NR^2C(O)R^{2a}$, $NR^2C(O)NR^2R^{2a}$, $CH(=NH)NH_2$,

NHC(=NH)NH₂, SO₂NR²R^{2a}, NR²SO₂NR²R^{2a}, NR²SO₂-C₁₋₄ alkyl, S(O)_pR^{1a}, and CF₃; and,

n is selected from 0 and 1.

5

[10] In another even more preferred embodiment, the present invention provides compounds of formula IIa:

10

IIa

or a stereoisomer or pharmaceutically acceptable salt form thereof, wherein;

15

R is selected from CO₂R¹, COR¹, OR¹, CONR²R^{2a}, S(O)_pR^{1a}, and S(O)_pNR²R^{2a};

20

R¹ and R^{1a} are independently selected from:

C₁₋₄ alkyl substituted with 0-1 R³,

C₃₋₆ carbocyclic residue substituted with 0-2 R⁴, and

5-6 membered heterocyclic system containing from 1-4 heteroatoms selected from the group consisting of N, O, and S substituted with 0-2 R⁴;

25

X is selected from C₁₋₄ alkylene, -C(O)-, -S(O)_p-, -NR²-, and O; and,

m is selected from 0 and 1.

30

[11] In another further preferred embodiment, the present invention provides compounds of formula IIa wherein;

R is selected from CO_2R^1 , COR^1 , OR^1 , and $\text{CONR}^2\text{R}^{2a}$;

R^1 and R^{1a} are independently selected from:

C_{1-4} alkyl substituted with 0-1 R^3 , and

5 C_{3-6} carbocyclic residue substituted with 0-2 R^4 ; and,

R^2 and R^{2a} may be taken together to form a 5 or 6 membered ring substituted with 0-2 R^4 .

10 [12] In another still further preferred embodiment, the present invention provides compounds of formula IIa wherein;

R^1 and R^{1a} are independently selected from C_{1-4} alkyl substituted with 0-1 R^3 ;

15 R^3 is phenyl substituted with 0-2 R^4 ; and,

Y is a C_{3-10} carbocyclic residue substituted with 0-2 R^4 .

20 [13] Additional specifically preferred compounds of the present invention are compounds, or pharmaceutically acceptable salt forms thereof, selected from the group consisting of:

25 *trans*-1-(methylsulfonyl)-3-([2'-aminosulfonyl-[1,1']-biphenyl-4-yl)aminocarbonyl)-4-(3-amidinophenyl)pyrrolidine;

30 *trans*-1-(methylsulfonyl)-3-([2'-tert-butyldaminosulfonyl-[1,1']-biphenyl-4-yl)aminocarbonyl)-4-(3-amidinophenyl)pyrrolidine;

35 *cis*-1-(methylsulfonyl)-3-([2'-aminosulfonyl-[1,1']-biphenyl-4-yl)aminocarbonyl)-4-(3-amidinophenyl)pyrrolidine;

40 *trans*-1-(methylsulfonyl)-3-([5-(2'-aminosulfonylphenyl-1-yl)pyridin-2-yl]aminocarbonyl)-4-(3-amidinophenyl)pyrrolidine;

trans-1-(methylsulfonyl)-3-[[5-(2'-tert-butylaminosulfonylphenyl-1-yl)pyridin-2-yl]aminocarbonyl]-4-(3-amidinophenyl)pyrrolidine;

5 1-(methylsulfonyl)-3-([2'-aminosulfonyl-[1,1']-biphenyl-4-yl)aminocarbonyl]-4-(3-amidinophenyl)- Δ^3 -pyrroline;

1-(benzyl)-3-([2'-aminosulfonyl-[1,1']-biphenyl-4-yl)aminocarbonyl]-4-(3-amidinophenyl)- Δ^3 -pyrroline;

10 *trans*-1-(methylsulfonyl)-3-([2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methylcarbonyl]-4-(3-amidinophenyl)pyrrolidine.

15 In a second embodiment, the present invention provides novel pharmaceutical compositions, comprising: a pharmaceutically acceptable carrier and a therapeutically effective amount of a compound of formula (I) or a pharmaceutically acceptable salt or prodrug form thereof.

20 In a third embodiment, the present invention provides a novel method for treating or preventing a thromboembolic disorder, comprising: administering to a patient in need thereof a therapeutically effective amount of a compound of 25 formula (I) or a pharmaceutically acceptable salt or prodrug form thereof.

DEFINITIONS

30 The compounds herein described may have asymmetric centers. Compounds of the present invention containing an asymmetrically substituted atom may be isolated in optically active or racemic forms. It is well known in the art how to prepare optically active forms, such as by resolution of 35 racemic forms or by synthesis from optically active starting materials. Many geometric isomers of olefins, C=N double bonds, and the like can also be present in the compounds described herein, and all such stable isomers are contemplated in the present invention. Cis and trans

geometric isomers of the compounds of the present invention are described and may be isolated as a mixture of isomers or as separated isomeric forms. All chiral, diastereomeric, racemic forms and all geometric isomeric forms of a 5 structure are intended, unless the specific stereochemistry or isomeric form is specifically indicated.

The term "substituted," as used herein, means that any one or more hydrogens on the designated atom is replaced with a selection from the indicated group, provided that the 10 designated atom's normal valency is not exceeded, and that the substitution results in a stable compound. When a substituent is keto (i.e., =O), then 2 hydrogens on the atom are replaced.

When any variable (e.g., R⁶) occurs more than one time 15 in any constituent or formula for a compound, its definition at each occurrence is independent of its definition at every other occurrence. Thus, for example, if a group is shown to be substituted with 0-2 R⁶, then said group may optionally be substituted with up to two R⁶ groups and R⁶ at each 20 occurrence is selected independently from the definition of R⁶. Also, combinations of substituents and/or variables are permissible only if such combinations result in stable compounds.

When a bond to a substituent is shown to cross a bond 25 connecting two atoms in a ring, then such substituent may be bonded to any atom on the ring. When a substituent is listed without indicating the atom via which such substituent is bonded to the rest of the compound of a given formula, then such substituent may be bonded via any atom in 30 such substituent. Combinations of substituents and/or variables are permissible only if such combinations result in stable compounds.

As used herein, "C₁₋₆ alkyl" is intended to include both branched and straight-chain saturated aliphatic hydrocarbon 35 groups having the specified number of carbon atoms, examples of which include, but are not limited to, methyl, ethyl, n-propyl, i-propyl, n-butyl, i-butyl, sec-butyl, t-butyl, pentyl, and hexyl; "Alkenyl" is intended to include

hydrocarbon chains of either a straight or branched configuration and one or more unsaturated carbon-carbon bonds which may occur in any stable point along the chain, such as ethenyl, propenyl, and the like.

5 "Halo" or "halogen" as used herein refers to fluoro, chloro, bromo, and iodo; and "counterion" is used to represent a small, negatively charged species such as chloride, bromide, hydroxide, acetate, sulfate, and the like.

10 As used herein, "carbocycle" or "carbocyclic residue" is intended to mean any stable 3- to 7-membered monocyclic or bicyclic or 7- to 13-membered bicyclic or tricyclic, any of which may be saturated, partially unsaturated, or aromatic. Examples of such carbocycles include, but are not 15 limited to, cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, cycloheptyl, adamanyl, cyclooctyl, [3.3.0]bicyclooctane, [4.3.0]bicyclononane, [4.4.0]bicyclodecane (decalin), [2.2.2]bicyclooctane, fluorenyl, phenyl, naphthyl, indanyl, adamanyl, or 20 tetrahydronaphthyl (tetralin).

As used herein, the term "heterocycle" or "heterocyclic system" is intended to mean a stable 5- to 7- membered monocyclic or bicyclic or 7- to 10-membered bicyclic heterocyclic ring which is saturated partially unsaturated 25 or unsaturated (aromatic), and which consists of carbon atoms and from 1 to 4 heteroatoms independently selected from the group consisting of N, O and S and including any bicyclic group in which any of the above-defined heterocyclic rings is fused to a benzene ring. The nitrogen 30 and sulfur heteroatoms may optionally be oxidized. The heterocyclic ring may be attached to its pendant group at any heteroatom or carbon atom which results in a stable structure. The heterocyclic rings described herein may be substituted on carbon or on a nitrogen atom if the resulting 35 compound is stable. If specifically noted, a nitrogen in the heterocycle may optionally be quaternized. It is preferred that when the total number of S and O atoms in the heterocycle exceeds 1, then these heteroatoms are not

adjacent to one another. As used herein, the term "aromatic heterocyclic system" is intended to mean a stable 5- to 7-membered monocyclic or bicyclic or 7- to 10-membered bicyclic heterocyclic aromatic ring which consists of carbon atoms and from 1 to 4 heterotams independently selected from the group consisting of N, O and S. It is preferred that the total number of S and O atoms in the aromatic heterocycle is not more than 1.

Examples of heterocycles include, but are not limited to, 1H-indazole, 2-pyrrolidonyl, 2H,6H-1,5,2-dithiazinyl, 2H-pyrrolyl, 3H-indolyl, 4-piperidonyl, 4aH-carbazole, 4H-quinolizinyl, 6H-1,2,5-thiadiazinyl, acridinyl, azocinyl, benzimidazolyl, benzofuranyl, benzothiofuranyl, benzothiophenyl, benzoxazolyl, benzthiazolyl, benztriazolyl, benztetrazolyl, benzisoxazolyl, benzisothiazolyl, benzimidazolonyl, carbazolyl, 4aH-carbazolyl, β -carbolinyl, chromanyl, chromenyl, cinnolinyl, decahydroquinolinyl, 2H,6H-1,5,2-dithiazinyl, dihydrofuro[2,3-b]tetrahydrofuran, furanyl, furazanyl, imidazolidinyl, imidazolinyl, 20 imidazolyl, 1H-indazolyl, indolenyl, indolinyl, indolizinyl, indolyl, isobenzofuranyl, isochromanyl, isoindazolyl, isoindolinyl, isoindolyl, isoquinolinyl (benzimidazolyl), isothiazolyl, isoxazolyl, morpholinyl, naphthyridinyl, octahydroisoquinolinyl, oxadiazolyl, 1,2,3-oxadiazolyl, 25 1,2,4-oxadiazolyl, 1,2,5-oxadiazolyl, 1,3,4-oxadiazolyl, oxazolidinyl, oxazolyl, oxazolidinylperimidinyl, phenanthridinyl, phenanthrolinyl, phenarsazinyl, phenazinyl, phenothiazinyl, phenoxathiinyl, phenoxazinyl, phthalazinyl, piperazinyl, piperidinyl, pteridinyl, 4-piperidonyl, 30 pteridinyl, purinyl, pyranyl, pyrazinyl, pyrazolidinyl, pyrazolinyl, pyrazolyl, pyridazinyl, pyridoxazole, pyridoimidazole, pyridothiazole, pyridinyl, pyridyl, pyrimidinyl, pyrrolidinyl, pyrrolinyl, pyrrolyl, quinazolinyl, quinolinyl, 4H-quinolizinyl, quinoxalinyl, 35 quinuclidinyl, carbolinyl, tetrahydrofuranyl, tetrahydroisoquinolinyl, tetrahydroquinolinyl, 6H-1,2,5-thiadiazinyl, 1,2,3-thiadiazolyl, 1,2,4-thiadiazolyl, 1,2,5-thiadiazolyl, 1,3,4-thiadiazolyl, thianthrenyl, thiazolyl,

thienyl, thienothiazolyl, thienooxazolyl, thienoimidazolyl, thiophenyl, triazinyl, 1,2,3-triazolyl, 1,2,4-triazolyl, 1,2,5-triazolyl, 1,3,4-triazolyl, xanthenyl. Preferred heterocycles include, but are not limited to, pyridinyl, 5 furanyl, thienyl, pyrrolyl, pyrazolyl, imidazolyl, indolyl, benzimidazolyl, 1*H*-indazolyl, oxazolidinyl, benzotriazolyl, benzisoxazolyl, oxindolyl, benzoxazolinyl, or isatinoyl. Also included are fused ring and spiro compounds containing, for example, the above heterocycles.

10 The phrase "pharmaceutically acceptable" is employed herein to refer to those compounds, materials, compositions, and/or dosage forms which are, within the scope of sound medical judgment, suitable for use in contact with the tissues of human beings and animals without excessive 15 toxicity, irritation, allergic response, or other problem or complication, commensurate with a reasonable benefit/risk ratio.

As used herein, "pharmaceutically acceptable salts" refer to derivatives of the disclosed compounds wherein the 20 parent compound is modified by making acid or base salts thereof. Examples of pharmaceutically acceptable salts include, but are not limited to, mineral or organic acid salts of basic residues such as amines; alkali or organic salts of acidic residues such as carboxylic acids; and the 25 like. The pharmaceutically acceptable salts include the conventional non-toxic salts or the quaternary ammonium salts of the parent compound formed, for example, from non-toxic inorganic or organic acids. For example, such conventional non-toxic salts include those derived from 30 inorganic acids such as hydrochloric, hydrobromic, sulfuric, sulfamic, phosphoric, nitric and the like; and the salts prepared from organic acids such as acetic, propionic, succinic, glycolic, stearic, lactic, malic, tartaric, citric, ascorbic, pamoic, maleic, hydroxymaleic, 35 phenylacetic, glutamic, benzoic, salicylic, sulfanilic, 2-acetoxybenzoic, fumaric, toluenesulfonic, methanesulfonic, ethane disulfonic, oxalic, isethionic, and the like.

The pharmaceutically acceptable salts of the present invention can be synthesized from the parent compound which contains a basic or acidic moiety by conventional chemical methods. Generally, such salts can be prepared by reacting 5 the free acid or base forms of these compounds with a stoichiometric amount of the appropriate base or acid in water or in an organic solvent, or in a mixture of the two; generally, nonaqueous media like ether, ethyl acetate, ethanol, isopropanol, or acetonitrile are preferred. Lists 10 of suitable salts are found in *Remington's Pharmaceutical Sciences*, 17th ed., Mack Publishing Company, Easton, PA, 1985, p. 1418, the disclosure of which is hereby incorporated by reference.

"Prodrugs" are intended to include any covalently 15 bonded carriers which release the active parent drug according to formula (I) *in vivo* when such prodrug is administered to a mammalian subject. Prodrugs of a compound of formula (I) are prepared by modifying functional groups present in the compound in such a way that the modifications 20 are cleaved, either in routine manipulation or *in vivo*, to the parent compound. Prodrugs include compounds of formula (I) wherein a hydroxy, amino, or sulfhydryl group is bonded to any group that, when the prodrug or compound of formula (I) is administered to a mammalian subject, cleaves to form 25 a free hydroxyl, free amino, or free sulfhydryl group, respectively. Examples of prodrugs include, but are not limited to, acetate, formate and benzoate derivatives of alcohol and amine functional groups in the compounds of formula (I), and the like. Preferred prodrugs are amidine 30 prodrugs wherein D is C(=NR⁷)NH₂, and R⁷ is selected from OH, C₁₋₄ alkoxy, C₆₋₁₀ aryloxy, C₁₋₄ alkoxycarbonyl, C₆₋₁₀ aryloxycarbonyl, C₆₋₁₀ arylmethylcarbonyl, C₁₋₄ alkylcarbonyloxy C₁₋₄ alkoxycarbonyl, and C₆₋₁₀ arylcarbonyloxy C₁₋₄ alkoxycarbonyl. More preferred prodrugs 35 are where R⁷ is OH, methoxy, ethoxy, benzyloxycarbonyl, methoxycarbonyl, and methylcarbonyloxy methoxycarbonyl.

"Stable compound" and "stable structure" are meant to indicate a compound that is sufficiently robust to survive

isolation to a useful degree of purity from a reaction mixture, and formulation into an efficacious therapeutic agent.

5

SYNTHESIS

The compounds of the present invention can be prepared in a number of ways known to one skilled in the art of organic synthesis. The compounds of the present invention can be synthesized using the methods described below, 10 together with synthetic methods known in the art of synthetic organic chemistry, or by variations thereon as appreciated by those skilled in the art. Preferred methods include, but are not limited to, those described below. The reactions are performed in a solvent appropriate to the 15 reagents and materials employed and suitable for the transformations being effected. It will be understood by those skilled in the art of organic synthesis that the functionality present on the molecule should be consistent with the transformations proposed. This will sometimes 20 require a judgment to modify the order of the synthetic steps or to select one particular process scheme over another in order to obtain a desired compound of the invention. It will also be recognized that another major consideration in the planning of any synthetic route in this 25 field is the judicious choice of the protecting group used for protection of the reactive functional groups present in the compounds described in this invention. An authoritative account describing the many alternatives to the trained practitioner is Greene and Wuts (*Protective Groups In 30 Organic Synthesis*, Wiley and Sons, 1991). All references cited herein are hereby incorporated in their entirety herein by reference.

The compounds of the present invention represented by Formula I are 1,3,4-trisubstituted and 1,3,3,4- 35 tetrasubstituted pyrrolidines, 1,3,4-trisubstituted Δ^3 -pyrrolines, and 2,4,5-trisubstituted, 2,4,4,5-tetrasubstituted and 2,4,5,5-tetrasubstituted isoxazolidines. A convenient method for the preparation of

these heterocycles utilizes a 1,3-dipolar cycloaddition of an appropriate 1,3-dipole with an appropriate dipolarophile. To prepare the pyrrolidine nucleus, the appropriate 1,3-dipole is an azomethine ylide. To prepare the isoxazolidine nucleus the appropriate 1,3-dipole is a nitrone (for reviews of 1,3-dipolar cycloaddition chemistry of azomethine ylides and nitrones, see *1,3-Dipolar Cycloaddition Chemistry* (A. Padwa, Ed.), Wiley-Interscience, New York, 1984; Tsuge and Kanemasa, in *Advances in Heterocyclic Chemistry* (A. Katritzky, Ed.), 1989, 45, p. 232; Torsell, in *Nitrile Oxides, Nitrones and Nitronates in Organic Synthesis*, VCh Publishers, Inc., New York, 1988; Breuer, Aurich and Nielsen, in *Nitrones, Nitronates, and Nitroxides*, Wiley, New York, 1989).

Although there are several methods known in the literature for generating stabilized azomethine ylides, fewer methods are available for generating the non-stabilized azomethine ylides required for the preparation of the pyrrolidine-containing compounds of the present invention. However, the decomposition of an appropriately substituted tertiary amine was found to be a suitable method for the purposes of the present invention. A general scheme for the generation and reaction of non-stabilized azomethine ylides using this method is shown in Scheme 1. The azomethine ylide precursors **1a** and **1b** are either commercially available or are readily prepared by methods known to those skilled in the art. Shown at the bottom of Scheme 1 are some preferred methods beginning with the readily available secondary amines **4** (Hosomi et al *Chem. Letters* 1984, 1117; Padwa et al. *J. Org. Chem.* 1985, 50, 4006). Treatment of **4** with aqueous formaldehyde in the presence of either methanol or potassium cyanide at near neutral pH generates the tertiary amines **1a** and **1b**, respectively. Alternatively, the anion of **4** can be generated with a suitable base, such as *n*-butyllithium or sodium hydride, and alkylated with chloromethyl methyl ether to generate **1a**. The substituent R' can be benzyl,

substituted benzyl, alkyl, cycloalkyl, etc., but preferably is benzyl.

Scheme 1

5 The generation of the azomethine ylide 2 from 1a and 1b is straightforward. Treatment of 1a with a number of acidic catalysts, such as trifluoroacetic acid, acetic acid, titanium tetrachloride or trifluoromethanesulfonic acid, causes its rapid decomposition to the azomethine ylide 2 (Terao et al *Chem. Pharm. Bull.* 1985, 33, 2762). The preferred catalyst is 5-25% trifluoroacetic acid in dichloromethane solvent. Treatment of 1b with silver fluoride in the dark also generates 2 (Padwa et al. *J. Org. Chem.* 1985, 50, 4006). This method relies on the 10 silylophilic nature of fluoride ion and is generally carried out in acetonitrile solvent. Once generated, the non-stabilized azomethine ylide 2 reacts with olefins to produce pyrrolidines 3 by 1,3-dipolar cycloaddition. Generally the 15 olefin needs to be activated by a suitable electron withdrawing group, such as carboxylic ester, carboxylic amide, ketone, nitrile, sulfone, nitro, etc. Styrenes which are substituted with electron withdrawing groups, such as carboxylic ester, carboxylic amide, ketone, nitrile, sulfone, nitro, etc., also are able to undergo reaction with 20 2 to produce aryl-substituted pyrrolidines. The 1,3-dipolar 25

cycloaddition is stereospecific in that the stereochemistry of the olefin is retained and translated into the relative stereochemistry of the pyrrolidine product. Thus, *trans*-disubstituted olefins undergo cyclization to produce 5 pyrrolidines 3 with a *trans* configuration of the 3,4-substituents on the pyrrolidine ring.

In Scheme 2 is shown how the just described 1,3-dipolar cycloaddition can be applied to the synthesis of the 1,3,4-trisubstituted and 1,3,3,4-tetrasubstituted pyrrolidine 10 nucleus contained in the compounds of the present invention. The required di- or trisubstituted olefins 6 are readily available from cyanobenzaldehydes 5 by reaction with stabilized Wittig reagents or with the sodium or potassium anions of phosphonate reagents. The stabilized Wittig 15 reagents react with 5 to give *E*-disubstituted olefins 6 (R^c = hydrogen, R^a = carbomethoxy, acetyl). The phosphonate anions also give *E*-di- or trisubstituted olefins 6 when R^c of the phosphonate is hydrogen or methyl, R^a is carbomethoxy or carboethoxy and R^d is methyl or ethyl. Modification of 20 the phosphonate also allows for the preparation of the *Z*-disubstituted olefins 6. Thus, treatment of bis(2,2,2-trifluoroethyl)(methoxycarbonylmethyl)phosphonate (R^d = $-CH_2CF_3$) with potassium bis(trimethylsilyl)amide and 18-crown-6 generates a potassium anion of the phosphonate that 25 reacts with 5 to give selectively the *Z*-disubstituted 6 where R^c is carbomethoxy and R^a is hydrogen.

Scheme 2

The 1,3-dipolar cycloaddition of olefins 6 with N-benzyl derivatives of 7 under TFA catalysis smoothly affords 5 the pyrrolidines 8. The relative stereochemistry about the pyrrolidine ring is determined by the geometry of the olefin 6 as described in connection with Scheme 1. Deprotection of the N-benzyl group (R^e , R^f = hydrogen) can be accomplished in several ways. Two preferred methods are catalytic 10 hydrogenation in the presence of di-tert-butyl dicarbonate followed by trifluoroacetic acid deprotection of the N-tert-butyl carbamate intermediate. This procedure affords 9 as the trifluoroacetic acid salt. Another method involves refluxing 8 in the presence of α -chloroethyl chloroformate 15 in a solvent such as 1,2-dichloroethane followed by refluxing in methanol to deprotect the α -chloroethyl carbamate intermediate (Olofson et al *J. Org. Chem.* 1984, 49, 2081). This method affords 9 as the hydrochloride salt.

20 In Scheme 3 is shown how to prepare compounds of Formula I in which J is CO, SO₂ or CO₂ attached to the pyrrolidine nucleus. Where J in Formula I is CO, the compounds can be prepared by two preferred methods. The first is the reaction of the pyrrolidine 9 with an acid 25 chloride in the presence of a suitable base such as

triethylamine. In cases where the required acid chloride is not commercially available, it can be prepared from the corresponding carboxylic acid by treatment with thionyl chloride or other methods known to those skilled in the art.

5 Alternatively, the pyrrolidine 9 can be coupled to a carboxylic acid using any of a number of peptide coupling methods (mixed anhydride, HBTU, DCC, etc.) well known to those skilled in the art of organic synthesis. The product of these methods is the amide 10. To prepare the carbamate 10 compounds 11, where J in Formula I is CO₂, the pyrrolidine 9 can be coupled to the appropriate chloroformate or succinimidyl carbonate in the presence of an appropriate base such as triethylamine. The compounds of Formula I where J is SO₂ can be prepared from pyrrolidine 9 by

15 treatment with the appropriate sulfonyl chloride to afford the sulfonamides 12. In cases where the sulfonyl chloride is not commercially available, it can be prepared from the corresponding sulfonic acid 13 using phosphorous pentachloride or thionyl chloride. Where the sulfonic acid 13 is not commercially available, it can be prepared from the corresponding bromide 14 by displacement with sodium sulfite.

20

To prepare compounds where J in Formula I is CH₂, a simple alkylation of the pyrrolidine 9 with the appropriate 25 primary alkyl bromide or chloride in the presence of a base such as triethylamine can provide the required compounds.

Scheme 3

To prepare pyrrolidine-containing compounds of Formula I where A-B is a biphenyl residue, the chemistry described in Scheme 4 can be used. For compounds where $-\text{J}(\text{CH}_2)_n-$ is 5 CH_2 the preferred method involves preparing the bromo-containing reagent 15 through alkylation of trimethylsilylmethylamine followed by reaction of the resulting secondary amine with aqueous formaldehyde in methanol as described previously. Other methods known to those skilled in the art can be envisioned to prepare this 10 compound. The 1,3-dipolar cycloaddition described earlier with olefin 6 affords the pyrrolidine 16. The biphenyl residue can be constructed using the palladium-catalyzed Suzuki coupling of 16 with an appropriate arylboronic acid 15 (Miyaura et al *Syn. Comm.* 1981, 11, 513). The product from the Suzuki coupling is the biphenyl compound 17. The arylboronic acid can be prepared from the corresponding arylbromide by transmetallation to the aryllithium reagent

with *n*-butyllithium or *t*-butyllithium followed by reaction with trimethylborate and hydrolysis to the boronic acid.

Scheme 4

5

Compounds containing different J-(CH₂)_n- groups such as 18, which are available following the procedures described in Scheme 3, can be transformed in an analogous fashion into the corresponding biphenyl-containing pyrrolidine compounds 10 19.

Scheme 5 describes methods used to elaborate the R-(CH₂)_m- group of Formula I in the pyrrolidine series of compounds. Compound 20 (m = 0) is obtainable by the procedures described in earlier schemes. Compound 20 (m = 15 1) is a one carbon homolog which can be prepared from the appropriate 20 (m = 0) analog by homologation procedures known to those skilled in the art of organic chemistry. To prepare carboxylic amide analogs, the ester 20 is first

hydrolyzed to the carboxylic acid and then is converted to the desired amide **21** by any of a variety of procedures known to those skilled in the art, such as the mixed anhydride method, DCC-mediated coupling, etc. Alcohol derivatives are 5 available by reduction of the carboxylic acid derived from **20** by either borane tetrahydrofuran complex or by a procedure involving sodium borohydride reduction of the mixed anhydride of the carboxylic acid. The ether derivatives **23** are readily available by etherification of 10 the alcohol **22** with an alkyl halide and a suitable base such as sodium hydride. The alcohol **22** can also be transformed into the thioether derivatives by first converting the alcohol into a good leaving group, for example by converting it into its mesylate or tosylate with the appropriate 15 sulfonyl chloride and a base such as pyridine or triethylamine. Displacement of the leaving group with a thiol in the presence of a base will then yield the thioether derivatives **24**. Oxidation of **24** by any of a variety of well known oxidizing agents can then afford the 20 corresponding sulfone derivatives **25**.

Scheme 5

All of the pyrrolidine derivatives described in Schemes 2-5 contain an aromatic cyano group which must be converted 5 to its amidine derivative to prepare the final compounds described by Formula I. Generally, in the course of preparing the compounds of this present invention, this conversion has been the final step in each synthetic sequence and it is shown in Scheme 6. The preferred method 10 was first described by Pinner and Klein (Ber., 1877, 10,

1889; for a more recent review see: Decroix, J. Chem. Res., 1978, 134). By this method the nitrile **26** is dissolved in an anhydrous alcohol or a mixture of at least one equivalent of an alcohol and an anhydrous aprotic cosolvent, such as chloroform or an acetate ester of the selected alcohol (i.e., methyl acetate for methyl alcohol). Typically, this mixture is cooled to below ambient temperature and dry hydrogen chloride gas is added via a gas dispersion tube until the solvent is saturated with HCl. The mixture is then sealed and stirred at ambient temperature or below to form an intermediate imidate. The imidate is isolated and dissolved in an anhydrous alcohol solvent and treated with ammonia, ammonium carbonate, ammonium acetate or alcoholic ammonia solution to afford the desired amidine **27**. These compounds are conveniently purified by preparative reverse phase HPLC or by recrystallization to give the pyrrolidine compounds defined by Formula I.

Scheme 6

In cases where A or B in compound 26 is substituted with a *tert*-butylsulfonamide group, the *tert*-butyl protecting group can be removed by refluxing in trifluoroacetic acid prior to subjecting these compounds to the Pinner sequence.

Although the Pinner sequence to produce the amidines 27 is generally the final step in the preparation of the pyrrolidine compounds of Formula I, some transformations can be carried out on the amidine derivatives themselves, as shown in Scheme 7. To prepare the carboxylic acid

derivatives of the present invention, the methyl ester 28 can be treated with an excess of lithium hydroxide in aqueous tetrahydrofuran to afford the acid 29. To prepare esters other than methyl esters, the methyl ester 28 can be 5 treated at reflux with an excess of another alcohol, such as isopropanol or *n*-butanol, in the presence of a catalytic amount of a titanium (IV) tetraalkoxide, such as titanium (IV) tetraisopropoxide. This reaction produces the alternate ester 30. Due to the large excess of alcohol used, the titanium reagent does not have to match the alcohol, thus reaction of 28 with excess *n*-butanol in the presence of catalytic titanium (IV) tetraisopropoxide produces the *n*-butyl ester derivative of 30.

Scheme 7

The syntheses of the pyrrolidine compounds described in the preceding schemes were all described for racemic compounds, despite the presence of one or more chiral centers in all of the compounds presented. It is also 20 possible to prepare many of the pyrrolidine compounds contained in this invention as single enantiomers in a well-defined manner by asymmetric synthesis. Presumably many of

the compounds would also be amenable to resolution methods to prepare single enantiomers. In Scheme 8 is described a method for the asymmetric synthesis of the pyrrolidine compounds of this invention. The preferred, but not the only, method for preparing single enantiomers of these compounds is by employing a 1,3-dipolar cycloaddition of an azomethine ylide with an olefin derivative which contains a chiral auxiliary to induce asymmetry. Although there are many chiral auxiliaries which would presumably be capable of inducing an enantioselective 1,3-dipolar cycloaddition, preferred auxiliaries are (1S)-(-)-2,10-camphorsultam and (1R)-(+)-2,10-camphorsultam, both of which are commercially available. A preferred, but not the only, method of introducing the camphorsultam auxiliary is by reaction of the aluminum reagent derived from the auxiliary 32 with an ester 31 to give the amide 33. The reaction of 33 with the azomethine ylide precursor described earlier in the presence of trifluoroacetic acid results in a 1,3-dipolar cycloaddition to give a mixture of diastereomeric pyrrolidines 34 and 35 (Fevig, *Bioorg. Med. Chem. Lett.* 1996, 6, 295). The diastereomers can be separated by flash chromatography and separately elaborated to enantiomerically pure pyrrolidine compounds of Formula I. The removal of the camphorsultam chiral auxiliary can be accomplished by two preferred methods. The first involves treating the cycloaddition product with lithium hydroxide in aqueous tetrahydrofuran which furnishes the carboxylic acid 36, which can be transformed into the corresponding methyl ester 37 by a variety of methods known to those skilled in the art. Additionally, the cycloaddition product can be treated with methanolic magnesium methoxide to afford the corresponding methyl ester 37 directly. The enantiomerically pure methyl esters 37 can be elaborated to enantiomerically pure pyrrolidine-containing compounds of Formula I by the procedures described in Schemes 2-7.

Scheme 8

The isoxazolidine-containing compounds of the present invention are preferably prepared by the 1,3-dipolar cycloaddition of an appropriate nitrone with an appropriate dipolarophile, as described earlier. Although there are several methods known in the literature for the generation of nitrone intermediates, a preferred method for generating the compounds of the present invention is shown in Scheme 9. In this method the nitrone is generated from the hydroxyl amine **38** by treatment with paraformaldehyde with concurrent removal of water (Wityak et al *J. Org. Chem.* **1987**, *52*, 2179). This is conveniently accomplished by refluxing the reaction mixture (to crack the paraformaldehyde polymer) in

a solvent such as benzene in the presence of a drying agent such as crushed activated molecular sieves to remove water produced in the reaction. The nitrone **39** thus generated reacts with a variety of olefins to produce the 5 regioisomeric isoxazolidines **40** and **41**.

Scheme 9

The R' group on **38** can be hydrogen, alkyl, alkylaryl, 10 aryl, etc. The reaction is stereospecific in that the geometry of the olefin is translated into the relative stereochemistry of the cycloaddition product, as is the case for the azomethine ylide 1,3-dipolar cycloadditions discussed earlier. Thus, an *E*-disubstituted olefin ($\text{R}^c = \text{H}$, 15 R^b, R^a = substituents) gives rise to isoxazolidines **40** and **41** having a *trans* relationship between R^a and R^b . The regioselectivity of the cycloaddition is dependent on the 20 nature and substitution pattern of the olefin. In some cases mixtures of **40** and **41** are produced while in other cases a certain olefin will result in a regioselective reaction and give rise to only **40** or **41**.

Much of the chemistry described for the pyrrolidine compounds in Schemes 2-8 can also be applied to the isoxazolidine compounds. In Scheme 10 is shown how the just 25 described nitrone 1,3-dipolar cycloaddition can be applied to the synthesis of the 2,4,5-trisubstituted, 2,4,4,5-tetrasubstituted and 2,4,5,5-tetrasubstituted isoxazolidines contained in the compounds of the present invention in which A-B of Formula I is a biphenyl residue and $\text{J}(\text{CH}_2)_n$ is CH_2 . 30 The preferred, but not the only, method for preparing compounds of this type is to prepare the appropriate 4-bromobenzylhydroxylamine **43** from the corresponding 4-

bromobenzaldehyde **42**. This is readily accomplished by standard formation of the oxime by standard methods, followed by reduction of the oxime to give **43**. This reduction can be accomplished with borane-pyridine complex 5 under acidic conditions or with sodium cyanoborohydride under acidic conditions.

Scheme 10

Generation of the nitrone with paraformaldehyde as 10 described in Scheme 9 and reaction with the appropriate olefinic benzonitrile **44** leads to a regioisomeric mixture of

isoxazolidines **45a** and **45b**. Suzuki coupling of **45a** and **45b** with the appropriate boronic acid, as described in Scheme 4, gives the isoxazolidines **46a** and **46b**. The amidine compounds **47a** and **47b**, corresponding to compounds described by Formula I, can be prepared by the Pinner protocol as described in Scheme 6.

To prepare isoxazolidine compounds of Formula I where $J(CH_2)_n$ is other than CH_2 ($J(CH_2)_n = (CH_2)_n$, $SO_2(CH_2)_n$, $CO(CH_2)_n$, $CO_2(CH_2)_n$, etc.) the methods described in Scheme 11 can be used. Generation of the nitrone **49** can be accomplished by treatment of hydroxylamine hydrochloride **48** with paraformaldehyde as described in Scheme 9. Reaction of **49** with an olefin **6** can afford the N-unsubstituted regioisomeric isoxazolidines **50a** and **50b**. Treatment of **50a** and **50b** with compounds of type **51** can be used to prepare a variety of N-substituted isoxazolidines **52a** and **52b**. Compounds **51** can include alkyl halides ($LG = Br$, Cl ; $J = CH_2$), sulfonyl chlorides ($LG = Cl$; $J = SO_2$), carboxylic acids ($LG = OH$; $J = CO$), carboxylic acid chlorides ($LG = Cl$; $J = CO$) and chloroformates ($LG = Cl$; $J = CO_2$). The reaction conditions to afford N-substituted isoxazolidines **52a** and **52b** can be those described in Scheme 3 for the pyrrolidine compounds or other procedures known to those skilled in the art of organic chemistry. The products **52** can be carried onto the final products described by Formula I following procedures described for the pyrrolidines in Schemes 4-8.

Scheme 11

In Scheme 12 is shown how the previously described 1,3-dipolar cycloaddition can be applied to the synthesis of the 5 1,3,4-trisubstituted Δ^3 -pyrroline nucleus contained in compounds of the present invention. The required dipolarophile for Δ^3 -pyrroline synthesis is an alkyne such as 54. These compounds can best be prepared by a variety of palladium-catalyzed aryl-alkyne coupling reactions. Two 10 such examples are shown in Scheme 12. In one case an alkynylzinc species of an appropriate substituted alkyne is generated with *n*-BuLi and zinc chloride. This species is then coupled to the appropriate aryl halide or aryl triflate 15 in the presence of a palladium (II) catalyst to give alkyne 54. Alternatively, the aryl halide or aryl triflate 53 can be coupled to an appropriate substituted alkyne in the presence of a palladium (0) catalyst, copper iodide and an organic amine base to give 54. Other procedures to 20 produce 54 are available and known to those skilled in the art. Reaction of 7 with alkyne 54, in which R^a is an electron-withdrawing group such as a carboxylic ester, carboxylic amide, ketone, nitrile, sulfone, nitro, etc., should produce the desired Δ^3 -pyrroline 55. The N-benzyl group can readily be removed by the 1-chloroethyl

chloroformate procedure described in Scheme 1 to afford the Δ^3 -pyrroline nucleus 56.

Scheme 12

5

In Scheme 13 is shown how to prepare compounds of Formula I in which R is COR^d , CO_2R^d , SO_2R^d or R^d attached to the pyrrolidine or Δ^3 -pyrroline nitrogen, where R^d is alkyl, aryl or alkylaryl. Where R in Formula I is COR^d , the compounds can be prepared by two preferred methods. The first is the reaction of the pyrrolidine or Δ^3 -pyrroline 57 with an acid chloride in the presence of a suitable base such as triethylamine. In cases where the required acid chloride is not commercially available, it can be prepared from the corresponding carboxylic acid by treatment with thionyl chloride or other methods known to those skilled in the art. Alternatively, the pyrrolidine or Δ^3 -pyrroline 57 can be coupled to a carboxylic acid using any of a number of peptide coupling methods (mixed anhydride, HBTU, DCC, etc.) well known to those skilled in the art of organic synthesis. The product of these methods is amide 58. To prepare carbamate compounds 59, where R in Formula I is CO_2R^d , the pyrrolidine or Δ^3 -pyrroline 57 can be coupled to the

appropriate chloroformate or succinimidyl carbonate in the presence of an appropriate base such as triethylamine. The compounds of Formula I where R is SO_2R^d can be prepared from pyrrolidine or Δ^3 -pyrroline 57 by treatment with the 5 appropriate sulfonyl chloride to afford the sulfonamides 60. In cases where the sulfonyl chloride is not commercially available, it can be prepared from the corresponding sulfonic acid 62 using phosphorous pentachloride or thionyl chloride. Where the sulfonic acid 62 is not commercially 10 available, it can be prepared from the corresponding bromide 61 by displacement with sodium sulfite. To prepare compounds where R in Formula I is R^d , a simple alkylation of the pyrrolidine or Δ^3 -pyrroline 57 with the appropriate primary alkyl bromide, chloride or tosylate in the presence 15 of a base such as triethylamine can provide the required compounds (Formula I, R = R^d).

Scheme 13

5 The compounds of Formula I contain a linking group Z connecting the pyrrolidine and Δ^3 -pyrroline rings to the A-B moiety. In Schemes 14-17 is shown how the various linking groups can be synthesized and incorporated into the structures of Formula Ib. It will be appreciated by those skilled in the art of organic synthesis that depending on the groups R and A-B of Formula Ib, some modification of reaction order or use of suitable protecting groups may be required to prepare the desired compounds. Many of the various linking groups can be derived from a carboxylic ester group when the azomethine ylide cyclizations of Scheme

10

15

2 are carried out on dipolarophiles 6 in which R^a or R^c is a carboxylic ester or when those of Scheme 3 are carried out on dipolarophiles 54 in which R^a is a carboxylic ester. For compounds of Formula Ib in which Z is an amide (-CONH-) 5 there is a variety of methods for preparing the desired compounds (Scheme 14). One preferred method is to treat the ester 64 directly with an aluminum reagent derived from a suitable amine 65. This is accomplished by first treating the amine 65 with trimethylaluminum in a solvent such as 10 methylene chloride or toluene and then adding the ester 64 and stirring at temperatures ranging from room temperature to 100° C. This procedure affords the amide 66 directly. Another preferred method is to hydrolyze the ester 64 to the carboxylic acid 67 under basic conditions. The acid 67 can 15 then be coupled to a suitable amine by many methods well known to those skilled in the art. One preferred method for this transformation is to treat 67 with oxalyl chloride or thionyl chloride to form the corresponding acid chloride. This intermediate can then be treated with amine 65 to 20 afford the amide 66. Another method is to allow the acid 67 and the amine 65 to react in the presence of a suitable peptide coupling reagent, such as BOP-Cl, HBTU, DCC or any of a variety of such agents that are well known to those skilled in the art.

25

Scheme 14

In Scheme 15 is shown how the ether, amine and ketone linking groups Z of Formula Ib compounds can be prepared from the carboxylic ester 64. To prepare the ether-linked compounds (Z = -CH₂O-), reduction of ester 64 to the corresponding primary alcohol is required. This transformation is possible by a variety of techniques. The preferred procedures involve the intermede carboxylic acid 67. The acid 67 can be reduced to the alcohol 68 directly 5 with borane tetrahydrofuran complex or by a procedure involving sodium borohydride reduction of a mixed anhydride derived from carboxylic acid 67. Completion of the ether linked compounds of Formula Ib is readily accomplished from 10 68 by the Mitsonobu protocol with an appropriate phenol or hydroxyheterocycle 69 to give 70 (Formula Ib, A = aryl or 15 heteroaryl). To prepare the amine-linked compounds of Formula Ib (Z = -CH₂NH-) alcohol 68 can be oxidized to aldehyde 71 by a number of procedures, two preferred methods of which are the Swern oxidation and oxidation with 20 pyridinium chlorochromate (PCC). Reductive amination of aldehyde 71 with an appropriate amine 65 and sodium cyanoborohydride then affords the amine linked compounds 72. The aldehyde 71 also can be used to prepare the ketone-linked compounds of Formula Ib (Z = -COCH₂-). Treatment of 25 71 with an organometallic species of structure 73 affords the alcohol 74. Compound 73 (where M = magnesium or zinc) is best prepared from the corresponding halide by treatment with metallic magnesium or zinc. These reagents readily react with aldehydes to afford alcohols. Oxidation of 30 alcohol 74 by any of a number of procedures, such as the Swern oxidation or PCC oxidation, affords the ketones 75. Alternatively, the ketones 75 can be prepared from the appropriate cinnamic or propionic acid derivatives 76. Treatment of 76 with the appropriate organomagnesium or 35 organozinc reagent 76 affords either the unsaturated ketone 77 directly (when X in 76 is Cl, N(Me)OMe) or an intermediate alcohol (when X in 76 is H) which can subsequently be oxidized to 77 by procedures described

above. Following the procedures described in Schemes 12 and 13, the unsaturated ketone 77 can be cyclized to the pyrrolidine or Δ^3 -pyrroline and subsequently converted to 32.

Scheme 15

5 In Scheme 16 is shown how compounds of Formula I containing the sulfonamide linking group (Z = -SO₂NH-) can

be prepared. The styrene **78** can be treated with a variety of reagents, such as sulfonyl chloride or sulfur trioxide and phosphorous pentachloride, to afford the unsaturated sulfonyl chloride **79**. Treatment with an appropriate amine **65** affords the sulfonamide **80** which can subsequently be converted into the sulfonamide-linked compounds **81** following the procedures described in Schemes 12 and 13.

Scheme 16

10

In Scheme 17 is shown how compounds of Formula Ib containing the sulfone linking group ($Z = -SO_2CH_2-$) can be prepared. Treatment of readily available **82** with trimethylphosphite affords a phosphonate which, after treatment with a suitable base such as sodium hydride, reacts with the aldehyde **5** to afford the unsaturated sulfide **83**. Oxidation to the corresponding sulfone **84** can be accomplished by a variety of reagents, such as $KMnO_4$. Alternatively, the oxidation can be carried out prior to the condensation with aldehyde **5**, in which case reaction of the anion of the sulfone phosphonate with **5** would give **84** directly. Following the procedures described in Schemes 12 and 13, the sulfone **84** can be converted to the sulfone-linked compounds **85**.

Scheme 17

5 All of the pyrrolidine and Δ^3 -pyrroline derivatives described in Schemes 14-17 contain an aromatic cyano group which must be converted to its amidine derivative to prepare the final compounds described by Formula Ib. This can be accomplished using the reduction procedures described above
10 in Scheme 6.

Where the group A-B in compounds of Formula Ib is a biphenyl residue, the chemistry described in Scheme 18 can be used. The biphenyl residue can be constructed using the palladium-catalyzed Suzuki coupling of an appropriate aryl 15 halide 86 with an appropriate arylboronic acid 87 to give the biphenyl 88 (Miyaura et. al. *Syn. Comm.* 1981, 11, 513). This reaction in general is tolerant of a wide variety of substituents on both of the reacting partners. Thus, the reaction can be performed on a variety of compounds 86 where
20 R' is a suitable precursor to the Z linking group found in compounds of Formula Ib. Alternatively, the coupling can be performed on a more fully elaborated aryl halide such as 89, where the pyrrolidine, Δ^3 -pyrroline or isoxazolidine heterocycle is intact. Reaction with a suitable boronic acid 90 then would afford 91. The biphenyl compounds 88 and 25 91 can be carried on to the final products described by Formula Ib according to the procedures described in Schemes 14-17.

Scheme 18

5

Groups A and B are available either through commercial sources, known in the literature or readily synthesized by the adaptation of standard procedures known to practitioners skilled in the art of organic synthesis. The required reactive functional groups appended to analogs of A and B are also available either through commercial sources, known in the literature or readily synthesized by the adaptation of standard procedures known to practitioners skilled in the art of organic synthesis. In the tables that follow the chemistry required to effect the coupling of A to B is outlined.

Table A: Preparation of Amide, Ester, Urea, Sulfonamide and Sulfamide linkages between A and B.

Rxn. No.	if A contains :	then the reactive substituent of Y is :	to give the following product A-X-Y :
1	A-NHR ² as a substituent	ClC(O)-Y	A-NR ² -C(O)-Y

2	a secondary NH as part of a ring or chain	ClC(O)-Y	A-C(O)-Y
3	A-OH as a substituent	ClC(O)-Y	A-O-C(O)-Y
4	A-NHR ² as a substituent	ClC(O)-CR ² R ² '-Y	A-NR ² -C(O)-CR ² R ² '-Y
5	a secondary NH as part of a ring or chain	ClC(O)-CR ² R ² '-Y	A-C(O)-CR ² R ² '-Y
6	A-OH as a substituent	ClC(O)-CR ² R ² '-Y	A-O-C(O)-CR ² R ² '-Y
7	A-NHR ³ as a substituent	ClC(O)NR ² -Y	A-NR ² -C(O)NR ² -Y
8	a secondary NH as part of a ring or chain	ClC(O)NR ² -Y	A-C(O)NR ² -Y
9	A-OH as a substituent	ClC(O)NR ² -Y	A-O-C(O)NR ² -Y
10	A-NHR ² as a substituent	ClSO ₂ -Y	A-NR ² -SO ₂ -Y
11	a secondary NH as part of a ring or chain	ClSO ₂ -Y	A-SO ₂ -Y
12	A-NHR ² as a substituent	ClSO ₂ -CR ² R ² '-Y	A-NR ² -SO ₂ -CR ² R ² '-Y
13	a secondary NH as part of a ring or chain	ClSO ₂ -CR ² R ² '-Y	A-SO ₂ -CR ² R ² '-Y
14	A-NHR ² as a substituent	ClSO ₂ -NR ² -Y	A-NR ² -SO ₂ -NR ² -Y
15	a secondary NH as part of a ring or chain	ClSO ₂ -NR ² -Y	A-SO ₂ -NR ² -Y
16	A-C(O)Cl	HO-Y as a substituent	A-C(O)-O-Y

17	A-C(O)Cl	NHR ² -Y as a substituent	A-C(O)-NR ² -Y
18	A-C(O)Cl	a secondary NH as part of a ring or chain	A-C(O)-Y
19	A-CR ² R ² 'C(O)Cl	HO-Y as a substituent	A-CR ² R ² 'C(O)-O-Y
20	A-CR ² R ² 'C(O)Cl	NHR ² -Y as a substituent	A-CR ² R ² 'C(O)-NR ² -Y
21	A-CR ² R ² 'C(O)Cl	a secondary NH as part of a ring or chain	A-CR ² R ² 'C(O)-Y
22	A-SO ₂ Cl	NHR ² -Y as a substituent	A-SO ₂ -NR ² -Y
23	A-SO ₂ Cl	a secondary NH as part of a ring or chain	A-SO ₂ -Y
24	A-CR ² R ² 'SO ₂ Cl	NHR ² -Y as a substituent	A-CR ² R ² 'SO ₂ -NR ² -Y
25	A-CR ² R ² 'SO ₂ Cl	a secondary NH as part of a ring or chain	A-CR ² R ² 'SO ₂ -Y

The chemistry of Table A can be carried out in aprotic solvents such as a chlorocarbon, pyridine, benzene or toluene, at temperatures ranging from -20°C to the reflux point of the solvent and with or without a trialkylamine base.

Table B: Preparation of ketone linkages between A and B.

Rxn. No.	if A contains :	then the reactive substituent of Y is :	to give the following product A-X-Y :
1	A-C(O)Cl	BrMg-Y	A-C(O)-Y
2	A-CR ² R ² 'C(O)Cl	BrMg-Y	A-CR ² R ² ' ₂ C(O)-Y
3	A-C(O)Cl	BrMgCR ² R ² '-Y	A-C(O)CR ² R ² '-Y
4	A-CR ² R ² 'C(O)Cl	BrMgCR ² R ² '-Y	A-CR ² R ² 'C(O)CR ² R ² '-Y

The coupling chemistry of Table B can be carried out by a variety of methods. The Grignard reagent required for Y 5 is prepared from a halogen analog of Y in dry ether, dimethoxyethane or tetrahydrofuran at 0°C to the reflux point of the solvent. This Grignard reagent can be reacted directly under very controlled conditions, that is low temperature (-20°C or lower) and with a large excess of acid 10 chloride or with catalytic or stoichiometric copper bromide-dimethyl sulfide complex in dimethyl sulfide as a solvent or with a variant thereof. Other methods available include transforming the Grignard reagent to the cadmium reagent and coupling according to the procedure of Carson 15 and Prout (Org. Syn. Col. Vol. 3 (1955) 601) or a coupling mediated by Fe(acac)₃ according to Fiandanese et al. (Tetrahedron Lett., (1984) 4805), or a coupling mediated by manganese (II) catalysis (Cahiez and Laboue, Tetrahedron Lett., 33(31), (1992) 4437).

Table C: Preparation of ether and thioether linkages
between A and B

Rxn. No.	if A contains :	then the reactive substituent of Y is :	to give the following product A-X-Y :
1	A-OH	Br-Y	A-O-Y
2	A-CR ² R ² '-OH	Br-Y	A-CR ² R ² 'O-Y
3	A-OH	Br-CR ² R ² '-Y	A-OCR ² R ² '-Y
4	A-SH	Br-Y	A-S-Y
5	A-CR ² R ² '-SH	Br-Y	A-CR ² R ² 'S-Y
6	A-SH	Br-CR ² R ² '-Y	A-SCR ² R ² '-Y

The ether and thioether linkages of Table C can be
5 prepared by reacting the two components in a polar aprotic
solvent such as acetone, dimethylformamide or
dimethylsulfoxide in the presence of a base such as
potassium carbonate, sodium hydride or potassium t-butoxide
at temperature ranging from ambient temperature to the
10 reflux point of the solvent used.

Table D: Preparation of -SO- and -SO₂- linkages from
thioethers of Table 3.

Rxn. No.	if the starting material is :	and it is oxidized with Alumina (wet) / Oxone (Greenhalgh, Synlett, (1992) 235) the product is :	and it is oxidized with m-chloroper- benzoic acid (Satoh et al., Chem. Lett. (1992) 381), the product is :
1	A-S-Y	A-S(O)-Y	A-SO ₂ -Y
2	A-CR ² R ² 'S-Y	A-CR ² R ² 'S(O)-Y	A-CR ² R ² 'SO ₂ -Y
3	A-SCR ² R ² '-Y	A-S(O)CR ² R ² '-Y	A-SO ₂ CR ² R ² '-Y

15 The thioethers of Table C serve as a convenient
starting material for the preparation of the sulfoxide and
sulfone analogs of Table D. A combination of wet alumina
and oxone provides a reliable reagent for the oxidation of

the thioether to the sulfoxide while m-chloroperbenzoic acid oxidation will give the sulfone.

Other features of the invention will become apparent in
5 the course of the following descriptions of exemplary
embodiments which are given for illustration of the
invention and are not intended to be limiting thereof.

EXAMPLES

10

Example 1

trans-1-benzyl-3-carbomethoxy-4-(3-
amidinophenyl)pyrrolidine bistrifluoroacetic acid salt.

15 Part A. Preparation of methyl *trans*-3-cyanocinnamate.

To a solution of 3-cyanobenzaldehyde (10.0 g, 76 mmol) in 500 mL of methylene chloride was added methyl (triphenylphosphoranylidene)acetate (25.4 g, 76 mmol). The mixture
20 was allowed to stir at room temperature for 16 h. The solvent was removed in vacuo and the residue was taken up in hexane/ethyl acetate and filtered through a large pad of silica gel. The solution was concentrated to afford 12.75 g (89%) of the cinnamate as a white solid which was
25 sufficiently pure for further reactions.

MS (H₂O-GC/MS): 188 (M+H)⁺.

Part B. Preparation of N-benzyl-N-
(trimethylsilylmethyl)aminomethyl methyl ether.

30

To a stirred mixture of methanol (1.25 mL, 31 mmol) and 37% aqueous formaldehyde (2.56 mL, 31 mmol) at 0° C was added N-benzyl-N-(trimethylsilylmethyl)amine (5.0 g, 26 mmol) dropwise over 5 minutes. The resulting mixture was
35 stirred for 2 h. Anhydrous potassium carbonate (1.02 g, 7.4 mmol) was added and the mixture was stirred at 0° C for 30 min. The reaction mixture was diluted with water and extracted twice with ether. The combined organic extracts

were washed with brine, dried over sodium sulfate and concentrated in vacuo to afford 5.6 g (92%) of the title compound. ^1H NMR (CDCl_3): δ 7.30-7.15 (m, 5H), 3.95 (s, 2H), 3.71 (s, 2H), 3.19 (s, 3H), 2.14 (s, 2H).

5

Part C. Preparation of *trans*-1-benzyl-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine.

To a solution of N-benzyl-N-(trimethylsilylimethyl)aminomethyl methyl ether (1.64 g, 6.9 mmol) in 20 mL of methylene chloride at 0° C was added methyl *trans*-3-cyanocinnamate (0.99 g, 5.3 mmol) followed by trifluoroacetic acid (0.041 mL, 0.53 mmol). The mixture was allowed to warm to room temperature and was stirred for 2 h. The reaction mixture was diluted with methylene chloride, washed with saturated aqueous NaHCO_3 and brine, dried over K_2CO_3 and concentrated in vacuo to afford 1.67 g (98%) of the title compound which was sufficiently pure for further reactions. MS (ESI) 321.1 ($\text{M}+\text{H})^+$.

20

Part D. Preparation of *trans*-1-benzyl-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine, bistrifluoroacetic acid salt.

A solution of *trans*-1-benzyl-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine (150 mg, 0.47 mmol) in 10 mL of anhydrous methanol and 30 mL of anhydrous chloroform was cooled to -10° C. Anhydrous HCl gas was bubbled through the solution for about 30 min (until solution saturated). The flask was then sealed and allowed to stand for 16 h at 0° C. The reaction mixture was concentrated in vacuo. The resulting solid was dissolved in 20 mL of anhydrous methanol and ammonium carbonate (0.26 g, 2.8 mmol) was added and the mixture was allowed to stir at room temperature for 24 h. The reaction mixture was concentrated in vacuo and purified by prep HPLC (C18 reverse phase column, elution with a $\text{H}_2\text{O}/\text{CH}_3\text{CN}$ gradient with 0.5% TFA) to afford 23 mg (13%) of the title compound as a white powder. MS (ESI) 169.8 ($\text{M}+2\text{H})^+$.

Example 2

5 trans-1-(4-amidinophenyl)methyl-3-carbomethoxy-4-(3-
amidinophenyl)pyrrolidine, bistrifluoroacetic acid salt.

Part A. Preparation of *trans*-1-tert-butyloxycarbonyl-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine.

10 To a solution of *trans*-1-benzyl-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine from Example 1, Part C (2.56 g, 8.00 mmol) in 250 mL of absolute ethanol was added 10% palladium on carbon (0.5 g) and di-tert-butyldicarbonate (1.92 g, 8.80 mmol). This mixture was allowed to stir under 1 atm of
15 hydrogen (maintained by a balloon) for 24 h. The reaction mixture was filtered through a pad of celite and concentrated in vacuo to afford 2.6 g (98%) of the title compound which was sufficiently pure for further reactions.
MS (ESI) 331.3 (M+H)+.

20 Part B. Preparation of *trans*-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine, trifluoroacetic acid salt.

25 To a solution of *trans*-1-tert-butyloxycarbonyl-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine in 50 mL of methylene chloride was added 50 mL of trifluoroacetic acid. The resulting solution was allowed to stir at room temperature for 4 h and then was concentrated in vacuo to afford 2.75 g (99%) of the title compound which was
30 sufficiently pure for further reactions. MS (ESI) 231.2 (M+H)+.

Part C. Preparation of *trans*-1-(4-cyanophenyl)methyl-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine.

35 To a solution of *trans*-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine, trifluoroacetic acid salt (0.52 g, 1.5 mmol) in 50 mL of acetonitrile was added 4-cyanobenzyl

bromide (0.29 g, 1.5 mmol) and sodium bicarbonate (0.32 g, 3.8 mmol). The resulting mixture was stirred at 80° C for 16 h. The mixture was allowed to cool to room temperature and the acetonitrile was removed in vacuo. The residue was 5 diluted with ethyl acetate, washed with H₂O and brine, dried over MgSO₄ and concentrated in vacuo. The residue was purified by flash chromatography (elution gradient with 5:1 to 2:1 hexanes/ethyl acetate) to afford 0.113 g (22%) of the title compound. MS (ESI) 346.2 (M+H)⁺.

10

Part D. Preparation of *trans*-1-(4-amidinophenyl)methyl-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine, *bistrifluoroacetic acid salt*.

15

By the procedure described in Example 1, Part D, *trans*-1-(4-cyanophenyl)methyl-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine (0.114 g, 0.33 mmol) was treated with HCl/methanol and then with ammonium carbonate (0.32 g, 3.3 mmol) to afford after HPLC purification (C18 reverse 20 phase column, elution with a H₂O/CH₃CN gradient with 0.5% TFA) 0.032 g (21%) of the title compound as a white powder. MS (ESI) 190.8 (M+2H)²⁺.

Example 3

25

trans-1-[(2'-aminosulfonyl-[1,1'-biphenyl-4-yl)methyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine, *bistrifluoroacetic acid salt*.

30

Part A. Preparation of N-(4-bromobenzyl)-N-(trimethylsilylmethyl)amine.

To a solution of (trimethylsilyl)methylamine (10.7 mL, 80 mmol) in 500 mL of tetrahydrofuran was added 4-35 bromobenzyl bromide (5.0 g, 20 mmol) and sodium bicarbonate (3.4 g, 40 mmol). The resulting mixture was stirred at 65° C for 16 h. The reaction mixture was allowed to cool to room temperature and concentrated in vacuo. The residue was

dissolved in ethyl acetate, washed with H_2O and brine, dried over $MgSO_4$ and concentrated in vacuo to afford 5.4 g (98%) of the title compound which was sufficiently pure for further reactions. 1H NMR ($CDCl_3$): δ 7.40 (d, 2H), 7.15 (d, 2H), 3.70 (s, 2H), 1.98 (s, 2H), 1.08 (broad s, 1H), 0.0 (s, 9H).

Part B. Preparation of N-(4-bromobenzyl)-N-(trimethylsilylmethyl)aminomethyl methyl ether.

10 To a stirred mixture of methanol (1.32 mL, 32.4 mmol) and 37% aqueous formaldehyde (2.63 mL, 32.4 mmol) at 0° C was added N-(4-bromobenzyl)-N-(trimethylsilylmethyl)amine (7.35 g, 27.0 mmol) dropwise over 15 minutes. The resulting 15 mixture was stirred for 3 h. Anhydrous potassium carbonate (1.04 g, 7.56 mmol) was added and the mixture was stirred at 0° C for 1 h. The reaction mixture was diluted with water and extracted twice with ether. The combined organic extracts were washed with brine, dried over sodium sulfate 20 and concentrated in vacuo to afford 8.52 g (99%) of the title compound. 1H NMR ($CDCl_3$): δ 7.48 (d, 2H), 7.15 (d, 2H), 3.95 (s, 2H), 3.66 (s, 2H), 3.19 (s, 3H), 2.11 (s, 2H), 0.0 (s, 9H).

25 Part C. Preparation of *trans*-1-(4-bromobenzyl)-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine.

To a solution of N-(4-bromobenzyl)-N-(trimethylsilylmethyl)aminomethyl methyl ether (13.85 g, 30 43.8 mmol) in 300 mL of methylene chloride at 0° C was added 35 methyl *trans*-3-cyanocinnamate from Example 1, Part A (7.13 g, 38.1 mmol) followed by trifluoroacetic acid (0.30 mL, 3.8 mmol). The mixture was allowed to warm to room temperature and was stirred for 2 h. The reaction mixture was diluted with methylene chloride, washed with saturated aqueous $NaHCO_3$ and brine, dried over K_2CO_3 , filtered through a large pad of silica gel and concentrated in vacuo to afford 13.2 g

(86%) of the title compound which was sufficiently pure for further reactions. MS (ESI) 399.2/401.2 (M+H)+.

Part D. Preparation of *trans*-1-[(2'-*tert*-
5 butylaminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-
carbomethoxy-4-(3-cyanophenyl)pyrrolidine.

To a solution of *trans*-1-(4-bromobenzyl)-3-
carbomethoxy-4-(3-cyanophenyl)pyrrolidine (1.0 g, 2.5 mmol)
10 in 50 mL of benzene was added 2-(*tert*-
butylaminosulfonyl)phenylboronic acid (0.90 g, 3.5 mmol),
tetrabutylammonium bromide (0.04 g, 0.12 mmol), sodium
carbonate (0.79 g, 7.5 mmol) and 8.2 mL of H₂O. This
mixture was degassed with a stream of nitrogen and then
15 tetrakis(triphenylphosphine)palladium (0.14 g, 0.12 mmol)
was added and the reaction mixture was stirred at 80° C for
6 h. The mixture was allowed to cool to room temperature
and then was diluted with ethyl acetate, washed with H₂O and
brine, dried over MgSO₄ and was concentrated in vacuo. The
20 residue was purified by flash chromatography (elution with
3:1 hexanes/ethyl acetate) to afford 0.65 g (49%) of the
title compound. MS (ESI) 532.2 (M+H)+.

Part E. Preparation of *trans*-1-[(2'-aminosulfonyl-[1,1']-
25 biphenyl-4-yl)methyl]-3-carbomethoxy-4-(3-
amidinophenyl)pyrrolidine, bistrifluoroacetic acid salt.

A solution of *trans*-1-[(2'-*tert*-butylaminosulfonyl-
[1,1']-biphenyl-4-yl)methyl]-3-carbomethoxy-4-(3-
30 cyanophenyl)pyrrolidine (0.195 g, 0.37 mmol) in 20 mL of
trifluoroacetic acid was stirred at 70° C for 1 h and then
was allowed to cool to room temperature and was concentrated
in vacuo. ¹H NMR (CDCl₃) indicated complete removal of the
tert-butyl group. The crude residue was dissolved in 8 mL
35 of anhydrous methanol and 25 mL of chloroform and was cooled
to 0° C. Anhydrous HCl gas was bubbled through the solution
for about 30 min (until solution saturated). The flask was
then sealed and allowed to stand for 16 h at 0° C. The

reaction mixture was concentrated in vacuo. The resulting solid was dissolved in 35 mL of anhydrous methanol and ammonium carbonate (0.16 g, 1.65 mmol) was added and the mixture was allowed to stir at room temperature for 24 h.

5 The reaction mixture was concentrated in vacuo and purified by prep HPLC (C18 reverse phase column, elution with a H₂O/CH₃CN gradient with 0.5% TFA) to afford 112 mg (47%) of the title compound as a white powder. MS (ESI) 247.2 (M+2H)²⁺.

10

Example 4

(3S,4R)-1-[(2'-aminosulfonyl-[1,1'-biphenyl-4-yl)methyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine,

15 bistrifluoroacetic acid salt.

Part A. Preparation of [3aS-[1(E),3a α ,6 α ,7a β]]-hexahydro-8,8-dimethyl-1-[1-oxo-3-(3-cyanophenyl)-2-propenyl]-3H-3a,6-methano-2,1-benzisothiazole-2,2-dioxide.

20

To a solution of (1S)-(-)-2,10-camphorsultam (3.0 g, 13.9 mmol) in 50 mL of toluene was added trimethylaluminum (6.97 mL of a 2M solution in toluene, 13.9 mmol) dropwise. The resulting solution was stirred at room temperature for about 2 h or until gas evolution had ceased. There was then added methyl *trans*-3-cyanocinnamate from Example 1, Part A (2.6 g, 13.9 mmol) and the mixture was stirred at 60° C for 16 h. The reaction mixture was allowed to cool to room temperature and was quenched by the addition of saturated aqueous NH₄Cl. The reaction was diluted with ethyl acetate and the organic layer was washed with brine, dried over MgSO₄ and concentrated in vacuo. The residue was recrystallized from hexanes/ethyl acetate to afford 3.65 g (70%) of the title compound as a white solid. MS (ESI) 371.3 (M+H)⁺.

Part B. Preparation of [3aS-[1(3S*,4R*),3a α ,6 α ,7a β]]-1-[(1-(4-bromobenzyl)-4-(3-cyanophenyl)-3-

5-pyrrolidinyl]carbonyl]hexahydro-8,8-dimethyl-3*H*-3*a*,6-methano-2,1-benzisothiazole-2,2-dioxide.

To a solution of [3*aS*-[1(*E*),3*a* α ,6 *α* ,7*a* β]]-hexahydro-8,8-dimethyl-1-[1-oxo-3-(3-cyanophenyl)-2-propenyl]-3*H*-3*a*,6-methano-2,1-benzisothiazole-2,2-dioxide (2.0 g, 5.4 mmol) in 40 mL of methylene chloride was added N-(4-bromobenzyl)-N-(trimethylsilylmethyl)aminomethyl methyl ether from Example 3, Part B (2.1 g, 6.7 mmol) and trifluoroacetic acid (0.042 mL, 0.54 mmol). The resulting solution was stirred at room temperature for 2 h and then was concentrated *in vacuo*. The residue was taken up in ethyl acetate, washed with saturated aqueous NaHCO₃ and brine, dried over MgSO₄ and concentrated *in vacuo*. The residue was purified by flash chromatography (elution with 7:1 to 2:1 hexanes/ethyl acetate gradient) to afford 1.8 g (57%) of the title compound as the major diastereomer. MS (ESI) 582.2/584.2 (M+H)⁺. Also isolated was 0.8 g (25%) of a minor diastereomer which is presumed to be [3*aS*-[1(3*R*^{*,4*S*^{*}),3*a* α ,6 *α* ,7*a* β]]-1-[(1-(4-bromobenzyl)-4-(3-cyanophenyl)-3-pyrrolidinyl]carbonyl]hexahydro-8,8-dimethyl-3*H*-3*a*,6-methano-2,1-benzisothiazole-2,2-dioxide. MS (ESI) 582.2/584.2 (M+H)⁺.}

Part C. Preparation of [3*aS*-[1(3*S*^{*,4*R*^{*}),3*a* α ,6 *α* ,7*a* β]]-1-[(1-(2'-*tert*-butylaminosulfonyl-[1,1']-biphenyl-4-yl)methyl)-4-(3-cyanophenyl)-3-pyrrolidinyl]carbonyl]hexahydro-8,8-dimethyl-3*H*-3*a*,6-methano-2,1-benzisothiazole-2,2-dioxide.}

[3*aS*-[1(3*S*^{*,4*R*^{*}),3*a* α ,6 *α* ,7*a* β]]-1-[(1-(4-bromobenzyl)-4-(3-cyanophenyl)-3-pyrrolidinyl]carbonyl]hexahydro-8,8-dimethyl-3*H*-3*a*,6-methano-2,1-benzisothiazole-2,2-dioxide (0.58 g, 1.0 mmol) was converted into the title compound (0.40 g, 56%) following the procedure described in Example 3, Part D. MS (ESI) 715.4 (M+H)⁺.}

Part D. Preparation of (3S,4R)-1-[(2'-tert-butylaminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-(3-cyanophenyl)pyrrolidin-3-ylcarboxylic acid.

5 To a solution of [3aS-[1(3S*,4R*),3a α ,6 α ,7a β]]-1-[(1-[(2'-tert-butylaminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-(3-cyanophenyl)-3-pyrrolidinyl]carbonyl]hexahydro-8,8-dimethyl-3H-3a,6-methano-2,1-benzisothiazole-2,2-dioxide (0.35 g, 0.49 mmol) in 10 mL of tetrahydrofuran and 5 mL of 10 H₂O was added lithium hydroxide monohydrate (62 mg, 1.47 mmol). The resulting mixture was stirred at room temperature for 16 h. The mixture was concentrated *in vacuo*, diluted with H₂O and saturated aqueous NaHCO₃ and extracted with hexane. The organic layer was discarded and 15 the aqueous layer was acidified to about pH 6 and extracted twice with ethyl acetate. The combined ethyl acetate extracts were washed with brine, dried over MgSO₄ and concentrated *in vacuo* to afford 80 mg (32%) of the title compound. MS (ESI) 518.3 (M+H)⁺.

20 Part E. Preparation of (3S,4R)-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine, bistrifluoroacetic acid salt.

25 (3S,4R)-1-[(2'-tert-butylaminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-(3-cyanophenyl)pyrrolidin-3-ylcarboxylic acid (50 mg, 0.1 mmol) was converted to the title compound following the procedure in Example 3, Part E to afford after 30 HPLC purification 25 mg (35%). The enantiomeric excess was determined to be >99% by chiral HPLC analysis.

Example 5

35 (3R,4S)-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine,
bistrifluoroacetic acid salt.

The title compound was prepared by the identical sequence of reactions described in Example 4 except that in Part A (1R)-(+)-2,10-camphorsultam was used as the chiral auxiliary. Chiral HPLC analysis of the title compound 5 showed the enantiomeric excess to be >99%. MS (ESI) 247.3 (M+2H)2+.

Example 6

10 trans-1-[(2'-aminosulfonyl-[1,1'-biphenyl-4-yl)methyl]-4-
(3-amidinophenyl)pyrrolidin-3-ylcarboxylic acid,
bistrifluoroacetic acid salt.

To a solution of trans-1-[(2'-aminosulfonyl-[1,1']-
15 biphenyl-4-yl)methyl]-3-carbomethoxy-4-(3-
amidinophenyl)pyrrolidine, bistrifluoroacetic acid salt from
Example 3, Part E (100 mg, 0.14 mmol) in 20 mL of
tetrahydrofuran and 10 mL of H₂O was added lithium hydroxide
20 monohydrate (40 mg, 0.96 mmol). The resulting mixture was
allowed to stir at room temperature overnight. The reaction
mixture was concentrated in vacuo and the residue was
purified by prep HPLC (C18 reverse phase column, elution
with a H₂O/CH₃CN gradient with 0.5% TFA) to afford 25 mg
(25%) of the title compound as a white powder. MS (ESI)
25 240.2 (M+2H)2+.

Example 7

30 trans-1-[(2'-aminosulfonyl-[1,1'-biphenyl-4-yl)methyl]-4-
(3-amidinophenyl)pyrrolidin-3-ylcarboxylic amide,
bistrifluoroacetic acid salt.

Part A. Preparation of trans-1-[(2'-aminosulfonyl-[1,1']-
biphenyl-4-yl)methyl]-3-carbomethoxy-4-(3-
35 cyanophenyl)pyrrolidine, trifluoroacetic acid salt.

A solution of trans-1-[(2'-tert-butylaminosulfonyl-
[1,1']-biphenyl-4-yl)methyl]-3-carbomethoxy-4-(3-

cyanophenyl)pyrrolidine from Example 3. Part D (1.28 g, 2.4 mmol) in 20 mL of trifluoroacetic acid was stirred at 70° C for 1 h and then was allowed to cool to room temperature and was concentrated to afford 1.0 g (88%) of the title
5 compound. MS (ESI) 476.2 (M+H)+.

Part B. Preparation of *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-(3-cyanophenyl)pyrrolidin-3-ylcarboxylic acid.

10 To a solution of *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine, trifluoroacetic acid salt (0.504 g, 1.06 mmol) in 40 mL of tetrahydrofuran and 20 mL of H₂O was
15 added lithium hydroxide monohydrate (0.13 g, 3.18 mmol). The resulting mixture was allowed to stir at room temperature for 16 h. The tetrahydrofuran was removed in vacuo and the residue was taken up in H₂O and saturated aqueous NaHCO₃ and washed once with hexane. The organic
20 layer was discarded. The aqueous layer was acidified with aqueous HCl to about pH 6 and extracted twice with ethyl acetate. The ethyl acetate extracts were washed with brine, dried over MgSO₄ and concentrated in vacuo to afford 0.29 g (59%) of the title compound which was sufficiently pure for
25 further reactions. MS (ESI) 462.2 (M+H)+.

Part C. Preparation of *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-(3-cyanophenyl)pyrrolidin-3-ylcarboxylic amide.

30 To a solution of *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-(3-cyanophenyl)pyrrolidin-3-ylcarboxylic acid (0.166 g, 0.36 mmol) in 10 mL of tetrahydrofuran at -78° C was added N-methylmorpholine (0.08 mL, 0.72 mmol) and isobutyl chloroformate (0.05 mL, 0.36 mmol). The resulting solution was allowed to stir for 30 min and then there was added 2M ammonia in methanol (0.70 mL, 1.08 mmol). The reaction mixture was allowed to slowly

warm to room temperature and then was stirred for 6 h. The solvent was removed in vacuo. The residue was taken up in ethyl acetate, washed with saturated aqueous NaHCO₃ and brine, dried over MgSO₄ and concentrated in vacuo to afford 5 0.144 g (87%) of the title compound which was sufficiently pure for further reactions. MS (ESI) 461.3 (M+H)⁺.

Part D. Preparation of *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-(3-amidinophenyl)pyrrolidin-3-10 ylcarboxylic amide, bistrifluoroacetic acid salt.

A solution of *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-(3-cyanophenyl)pyrrolidin-3-ylcarboxylic amide (0.143 g, 0.31 mmol) in 50 mL of 15 anhydrous methanol was cooled to 0° C. Anhydrous HCl gas was bubbled through the solution for about 30 min (until solution saturated). The flask was then sealed and allowed to stand for 16 h at 0° C. The reaction mixture was concentrated in vacuo. The resulting solid was dissolved in 20 20 mL of anhydrous methanol and ammonium carbonate (0.15 g, 1.55 mmol) was added and the mixture was allowed to stir at room temperature for 24 h. The reaction mixture was concentrated in vacuo and purified by prep HPLC (C18 reverse phase column, elution with a H₂O/CH₃CN gradient with 0.5% 25 TFA) to afford 27 mg (18%) of the title compound as a white powder. MS (ESI) 239.8 (M+2H)2+.

Example 8

30 *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-(3-amidinophenyl)pyrrolidin-3-ylcarboxylic N,N-dimethylamide, bistrifluoroacetic acid salt.

Part A. Preparation of *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-(3-cyanophenyl)pyrrolidin-3-ylcarboxylic N,N-dimethylamide.

To a solution of *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-(3-cyanophenyl)pyrrolidin-3-ylcarboxylic acid from Example 7, Part B (0.11 g, 0.24 mmol) in 20 mL of tetrahydrofuran at -78° C was added N-5 methylmorpholine (0.08 mL, 0.72 mmol) and isobutyl chloroformate (0.03 mL, 0.24 mmol). The resulting mixture was allowed to stir for 30 min and then dimethylamine hydrochloride (0.02 g, 0.24 mmol) was added and the mixture was allowed to slowly warm to room temperature and then was 10 stirred for 16 h. The solvent was removed in *vacuo*. The residue was taken up in ethyl acetate, washed with saturated aqueous NaHCO₃ and brine, dried over MgSO₄ and concentrated in *vacuo* to afford 0.097 g (83%) of the title compound which was sufficiently pure for further reactions. MS (ESI) 489.3 15 (M+H)⁺.

Part B. Preparation of *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-(3-amidinophenyl)pyrrolidin-3-ylcarboxylic N,N-dimethylamide, bistrifluoroacetic acid 20 salt.

Following the procedure of Example 7, Part D, *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-(3-cyanophenyl)pyrrolidin-3-ylcarboxylic N,N-dimethylamide 25 (0.098 g, 0.20 mmol) was converted with HCl gas/methanol and ammonium carbonate (0.10 g, 1.0 mmol) into the title compound (22 mg, 22%) following HPLC purification. MS (ESI) 253.8 (M+2H)²⁺.

30

Example 9

cis-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine, bistrifluoroacetic acid salt.

35

Part A. Preparation of methyl *cis*-3-cyanocinnamate.

To a solution of bis(2,2,2-trifluoroethyl)(methoxycarbonylmethyl)phosphonate (5.0 g, 15.7 mmol) and 18-crown-6 (20.7 g, 78.5 mmol) in 300 mL of tetrahydrofuran at -78° C was added potassium 5 bis(trimethylsilyl)amide (31.4 mL of a 0.5 M solution in toluene, 15.7 mmol) dropwise. After the addition was complete 3-cyanobenzaldehyde (2.06 g, 15.7 mmol) was added and the resulting mixture was stirred for 30 minutes at -78° C. The reaction was quenched by the addition of saturated 10 aqueous NH₄Cl and then extracted three times with ether. The combined ether extracts were washed with brine, dried over Na₂SO₄ and concentrated in vacuo to afford 2.86 g (97%) of the product which was sufficiently pure for further reactions. ¹H NMR (CDCl₃) δ 7.85 (s, 1H), 7.76 (d, 1H), 7.60 15 (d, 1H), 7.45 (t, 1H), 6.93 (d, 1H), 6.05 (d, 1H), 3.70 (s, 3H).

Part B. Preparation of *cis*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine, bistrifluoroacetic acid salt.

Following the procedures described in Example 3, Parts C-E, methyl *cis*-3-cyanocinnamate was converted into the title compound, a white powder following HPLC purification. 25 MS (ESI) 247.2 (M+2H)2+.

Example 10

cis-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-(3-amidinophenyl)pyrrolidin-3-ylcarboxylic acid, bistrifluoroacetic acid salt.

Following the procedure described in Example 6, Part A, *cis*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine, bistrifluoroacetic acid salt (0.10 g, 0.14 mmol) was treated 35 with lithium hydroxide monohydrate (0.04 g, 0.96 mmol) to

afford, after HPLC purification, 46 mg (46%) of the title compound as a white powder. MS (ESI) 240.2 (M+2H)2+.

Example 11

5

trans-1-[(2'-aminosulfonyl-[1,1'-biphenyl-4-yl)methyl]-3-carboisopropoxy-4-(3-amidinophenyl)pyrrolidine, bistrifluoroacetic acid salt.

10 To a solution of trans-1-[(2'-aminosulfonyl-[1,1'-biphenyl-4-yl)methyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine, bistrifluoroacetic acid salt (0.50 g, 0.69 mmol) in 50 mL of isopropanol was added several drops of titanium (IV) isopropoxide. The resulting 15 mixture was stirred at 80° C for 16 h. The reaction was allowed to cool to room temperature and the solvent was removed in *vacuo*. The residue was triturated with ether and then was purified by HPLC under the conditions described in Example 1 to afford 0.30 g (58%) of the title compound as a 20 white powder. MS (ESI) 261.3 (M+2H)2+.

Example 12

25 trans-1-[(2'-aminosulfonyl-[1,1'-biphenyl-4-yl)methyl]-3-carbobutoxy-4-(3-amidinophenyl)pyrrolidine, bistrifluoroacetic acid salt.

30 To a solution of trans-1-[(2'-aminosulfonyl-[1,1'-biphenyl-4-yl)methyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine, bistrifluoroacetic acid salt (0.50 g, 0.69 mmol) in 50 mL of *n*-butanol was added several drops of titanium (IV) isopropoxide. The resulting mixture was stirred at 115° C for 16 h. The reaction was allowed to cool to room temperature and the solvent was removed in 35 *vacuo*. The residue was triturated with ether and then was purified by HPLC under the conditions described in Example 1 to afford 0.32 g (60%) of the title compound as a white powder. MS (ESI) 268.4 (M+2H)2+.

Example 13

5 trans-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-
acetyl-4-(3-amidinophenyl)pyrrolidine, bistrifluoroacetic
acid salt.

Part A. Preparation of (E)-4-(3-cyanophenyl)-3-buten-2-one.

10 To a solution of 3-cyanobenzaldehyde (4.98 g, 38 mmol) in 250 mL of methylene chloride was added acetylmethylenetriphenylphosphorane (12.1 g, 38 mmol) and the resulting mixture was allowed to stir at room temperature for 16 h. The solution was concentrated in vacuo and the residue was
15 taken up in hexane/ethyl acetate and filtered through a large pad of silica gel. The solvents were removed in vacuo to afford 5.63 g (87%) of the title compound which was sufficiently pure for further reactions. ^1H NMR (CDCl_3) δ 7.8 (s, 1H), 7.76 (d, 1H), 7.65 (d, 1H), 7.53 (d, 1H), 7.45
20 (d, 1H), 6.75 (d, 1H), 2.40 (s, 3H).

Part B. Preparation of trans-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-acetyl-4-(3-amidinophenyl)pyrrolidine, bistrifluoroacetic acid salt.

25 Following the procedures described in Example 3, Parts C-E, (E)-4-(3-cyanophenyl)-3-buten-2-one was converted to the title compound as a white solid following HPLC purification. MS (ES) 239.3 ($\text{M}+2\text{H}$) 2^+ .

30

Example 14

35 trans-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-carboethoxy-3-methyl-4-(3-amidinophenyl)pyrrolidine,
bistrifluoroacetic acid salt.

Part A. Preparation of ethyl (E)- α -methyl-3-cyanocinnamate.

To a suspension of sodium hydride (0.5 g, 21 mmol) in 50 mL of THF was added triethyl 2-phosphonopropionate (5.0 g, 21 mmol). The resulting mixture was stirred at room temperature until gas evolution ceased and the sodium hydride was consumed (about 1 h). To the resulting clear solution was added 3-cyanobenzaldehyde (2.75 g, 21 mmol) and the mixture was stirred at 60° C for 3 h. The reaction mixture was allowed to cool to room temperature and was diluted with ethyl acetate, washed with 10% aqueous HCl, saturated aqueous NaHCO₃ and brine, dried over MgSO₄ and concentrated in vacuo. The residue was purified by flash chromatography (elution with 6:1 hexanes/ethyl acetate) to afford 2.8 g (62%) of the title compound. ¹H NMR (CDCl₃): δ 7.65-7.48 (m, 5H), 4.29 (q, J=7.2 Hz, 2H), 2.09 (d, J=1.5 Hz, 3H), 1.35 (t, J=7.2 Hz, 3H). MS (H₂O-GC/MS) 216 (M+H)⁺.

Part B. Preparation of *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-carbomethoxy-3-methyl-4-(3-amidinophenyl)pyrrolidine, bistrifluoroacetic acid salt.

Following the procedures of Example 3, Parts C-E, ethyl (E)- α -methyl-3-cyanocinnamate was converted into the title compound, a white powder following HPLC purification. MS (ESI) 261.3 (M+2H) 2+.

25

Example 15

trans-1-[(2-cyanophenylthio)phenylcarbonyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine, trifluoroacetic acid salt.

Part A. Preparation of *trans*-1-[(2-(2-cyanophenylthio)phenyl)carbonyl]-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine.

35

To a solution of *trans*-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine, trifluoroacetic acid salt from Example 2, Part B (0.50 g, 1.45 mmol) in 25 mL of

dimethylformamide was added 2-(2-cyanophenylthio)benzoic acid (0.37 g, 1.45 mmol), HBTU (0.55 g, 1.45 mmol) and diisopropylethylamine (0.56 mL, 3.19 mmol). The resulting mixture was stirred at room temperature for 24 h. The 5 reaction mixture was then diluted with ethyl acetate and washed twice with H₂O, then once with 10% aqueous HCl, saturated aqueous NaHCO₃ and brine. The organics were dried over MgSO₄ and concentrated in vacuo. The residue was purified by flash chromatography (elution gradient 3:1 10 hexanes/ethyl acetate to 1:1 hexanes/ethyl acetate) to afford 0.41 g (60%) of the title compound. MS (ESI) 468.2 (M+H)⁺.

Part B. Preparation of *trans*-1-[(2-(2-cyanophenylthio)phenyl)carbonyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine, trifluoroacetic acid salt.

Following the procedure of Example 7, Part D, *trans*-1-[(2-(2-cyanophenylthio)phenyl)carbonyl]-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine (0.107 g, 0.23 mmol) was converted with HCl gas/methanol and ammonium carbonate (0.22 g, 2.3 mmol) into the title compound (33 mg, 29%) following HPLC purification. MS (ESI) 485.3 (M+H)⁺.

25

Example 16

trans-1-[(2-(2-cyanophenylthio)phenyl)methyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine, bis trifluoroacetic acid salt.

30

Part A. Preparation of 2-(2-cyanophenylthio)benzyl alcohol.

To a solution of 2-(2-cyanophenylthio)benzoic acid (9.96 g, 39 mmol) in 300 mL of tetrahydrofuran at -15° C was 35 added triethylamine (5.4 mL, 39 mmol) followed by isobutylchloroformate (5.1 mL, 39 mmol). The resulting mixture was stirred for 15 minutes and then was filtered into another flask and cooled to -15° C. Then there was

added sodium borohydride (2.95 g, 78 mmol) in 5 mL of H₂O. The resulting mixture was allowed to stir at -15° C for 20 minutes and then at room temperature for 1 h. The reaction was quenched with 10% aqueous HCl and the solvent was removed in vacuo. The residue was taken up in ethyl acetate, washed with brine, dried over MgSO₄, filtered through a pad of silica gel and concentrated in vacuo to afford 7.03 g (75%) of the title compound which was sufficiently pure for further reactions. MS (NH₃-DCI) 259 10 (M+NH₄)⁺.

Part B. Preparation of 2-(2-cyanophenylthio)benzyl bromide.

To a solution of 2-(2-cyanophenylthio)benzyl alcohol 15 (2.03 g, 8.3 mmol) in 100 mL of methylene chloride at 0° C was added carbon tetrabromide (3.02 g, 9.1 mmol) and triphenylphosphine (2.39 g, 9.1 mmol). The resulting mixture was allowed warm to room temperature and was stirred for 16 h. The reaction mixture was concentrated in vacuo, 20 taken up in hexanes/ethyl acetate, washed with brine, dried over MgSO₄, filtered through a pad of silica gel and concentrated. The residue was taken up in hexanes/ether and filtered through a pad of silica gel to remove residual triphenylphosphine oxide. Concentration in vacuo afforded 25 2.49 g (98%) of the title compound which was sufficiently pure for further reactions. MS (NH₃-DCI) 321/323 (M+NH₄)⁺.

Part C. Preparation of trans-1-[(2-(2-cyanophenylthio)phenyl)methyl]-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine.

To a solution of trans-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine, trifluoroacetic acid salt from Example 2, Part B (0.59 g, 1.7 mmol) in 50 mL of 35 acetonitrile was added 2-(2-cyanophenylthio)benzyl bromide (0.52 g, 1.7 mmol) and sodium bicarbonate (0.43 g, 5.1 mmol). The resulting mixture was stirred at 80° C for 16 h. The reaction was allowed to cool to room temperature and was

concentrated in vacuo. The residue was taken up in ethyl acetate, washed with H₂O and brine, dried over MgSO₄ and concentrated in vacuo. The residue was purified by flash chromatography (elution gradient 5:1 hexanes/ethyl acetate to 2:1 hexanes/ethyl acetate) to afford 0.10 g (13%) of the title compound. MS (ESI) 454.2 (M+H)⁺.

5 Part D. Preparation of *trans*-1-[[2-(2-cyanophenylthio)phenyl]methyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine, bistrifluoroacetic acid salt.

10 Following the procedure of Example 7, Part D, *trans*-1-[[2-(2-cyanophenylthio)phenyl]methyl]-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine (0.104 g, 0.23 mmol) was converted 15 with HCl gas/methanol and ammonium carbonate (0.10 g, 1.05 mmol) into the title compound (12 mg, 10%) following HPLC purification. MS (ESI) 236.3 (M+2H)²⁺.

Example 17

20 *trans*-1-[(2'-aminosulfonyl-[1,1'biphenyl-4-yl)sulfonyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine, trifluoroacetic acid salt.

25 Part A. Preparation of *trans*-1-[(4-bromophenyl)sulfonyl]-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine.

30 To a solution of *trans*-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine, trifluoroacetic acid salt from Example 2, Part B (0.52 g, 1.5 mmol) in 100 mL of tetrahydrofuran at room temperature was added 4-bromobenzenesulfonyl chloride (0.38 g, 1.5 mmol) and triethylamine (0.4 mL, 3.0 mmol). The resulting mixture was allowed to stir for 16 h. The solvent was removed in vacuo 35 and the residue was taken up in ethyl acetate, washed with saturated aqueous NaHCO₃ and brine, dried over MgSO₄ and concentrated in vacuo to afford 0.56 g (84%) of the title

compound which was sufficiently pure for further reactions.
MS (ESI) 449/451 (M+H)+.

5 Part B. Preparation of *trans*-1-[(2'-*tert*-butylaminosulfonyl-[1,1']-biphenyl-4-yl)sulfonyl]-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine.

Following the procedure described in Example 3, Part D, *trans*-1-[(4-bromophenyl)sulfonyl]-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine (0.40 g, 0.9 mmol) was converted into 0.20 g (38%) of the title compound following purification by flash chromatography (elution with 3:1 hexanes/ethyl acetate). MS (ESI) 582.3 (M+H)+.

15 15 Part C. Preparation of *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)sulfonyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine, trifluoroacetic acid salt.

Following the procedure of Example 3, Part E, *trans*-1-[(2'-*tert*-butylaminosulfonyl-[1,1']-biphenyl-4-yl)sulfonyl]-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine (0.20 g, 0.35 mmol) was converted sequentially with trifluoroacetic acid, HCl gas/methanol and ammonium carbonate (0.168 g, 1.75 mmol) into the title compound (15 mg, 7%) following HPLC 25 purification. MS (ESI) 543.3 (M+H)+.

Example 18

30 *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)sulfonyl]-3-carboisopropoxy-4-(3-amidinophenyl)pyrrolidine,
trifluoroacetic acid salt.

Part A. Preparation of *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)sulfonyl]-3-carboisopropoxy-4-(3-amidinophenyl)pyrrolidine, trifluoroacetic acid salt.

Following the procedure described in Example 11, Part A, *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-

yl)sulfonyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine, trifluoroacetic acid salt (0.023 g, 0.035 mmol) was converted into 0.016 g (67%) of the title compound as a white powder following HPLC purification. MS (ESI) 571.3
5 (M+H)+.

Example 19

trans-1-[9-fluorenylmethoxycarbonyl]-3-carbomethoxy-4-(3-
10 amidinophenyl)pyrrolidine, trifluoroacetic acid salt.

Part A. Preparation of *trans*-1-[9-fluorenylmethoxycarbonyl]-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine.

15 To a solution of *trans*-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine, trifluoroacetic acid salt (0.53 g, 1.54 mmol) from Example 2, Part B in 15 mL of acetonitrile was added 9-fluorenylmethyl succinimidyl carbonate (0.52 g, 1.54 mmol) and triethylamine (0.21 mL, 1.54 mmol). The resulting mixture was allowed to stir at room temperature for 16 h. The reaction mixture was diluted with ethyl acetate, washed with 10% aqueous HCl, saturated aqueous NaHCO₃ and brine, dried over MgSO₄ and concentrated in vacuo. The residue was purified by flash chromatography (elution with 3:1 hexanes/ethyl acetate) to afford 0.55 g (79%) of the title compound. MS (ESI) 453.4 (M+H)+.

Part B. Preparation of *trans*-1-[9-fluorenylmethoxycarbonyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine, trifluoroacetic acid salt.

30 Following the procedure described in Example 1, Part D, *trans*-1-[9-fluorenylmethoxycarbonyl]-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine (0.11 g, 0.24 mmol) was treated with HCl/methanol and then with ammonium carbonate (0.14 g, 1.5 mmol) to afford after HPLC purification (C18 reverse phase column, elution with a H₂O/CH₃CN gradient with 0.5% TFA)

0.050 g (36%) of the title compound as a white powder. MS (ESI) 470.3 (M+H)+.

Example 20

5

trans-2-benzyl-4-carbomethoxy-5-(3-amidinophenyl)isoxazolidine, trifluoroacetic acid salt.

10 Part A. Preparation of *trans*-2-benzyl-4-carbomethoxy-5-(3-cyanophenyl)isoxazolidine.

15 To a solution of methyl *trans*-3-cyanocinnamate (1.2 g, 6.5 mmol) in 20 mL of benzene was added benzylhydroxylamine (0.89 g, 7.2 mmol), paraformaldehyde (0.98 g, 32.5 mmol) and crushed 4Å molecular sieves. The resulting mixture was stirred at 80° C for 16 h. The reaction mixture was allowed to cool to room temperature, was filtered through celite and diluted with ethyl acetate. The solution was washed with H₂O and brine, dried over MgSO₄, filtered through a pad of 20 silica gel and concentrated *in vacuo* to afford 1.4 g (67%) of the title compound which was sufficiently pure for further reactions. MS (CH₄-CI) 323.1 (M+H)+.

25 Part B. Preparation of *trans*-2-benzyl-4-carbomethoxy-5-(3-amidinophenyl)isoxazolidine, trifluoroacetic acid salt.

30 A solution of *trans*-2-benzyl-4-carbomethoxy-5-(3-cyanophenyl)isoxazolidine (150 mg, 0.47 mmol) in 10 mL of anhydrous methanol and 30 mL of anhydrous chloroform was cooled to 0° C. Anhydrous HCl gas was bubbled through the solution for about 30 min (until solution saturated). The flask was then sealed and allowed to stand for 16 h at 0° C. The reaction mixture was concentrated *in vacuo*. The resulting solid was dissolved in 10 mL of anhydrous methanol 35 and ammonium carbonate (0.27 g, 2.8 mmol) was added and the mixture was allowed to stir at room temperature for 24 h. The reaction mixture was concentrated *in vacuo* and purified by prep HPLC (C18 reverse phase column, elution with a

$\text{H}_2\text{O}/\text{CH}_3\text{CN}$ gradient with 0.5% TFA) to afford 100 mg (47%) of the title compound as a white powder. MS (ESI) 340.2 (M+H)+.

5

Example 21

trans-2-[(2'-aminosulfonyl-1,1'-biphenyl-4-yl)methyl]-4-carbomethoxy-5-(3-amidinophenyl)isoxazolidine.
trifluoroacetic acid salt.

10

Part A. Preparation of 4-bromobenzaldehyde oxime.

To a solution of 4-bromobenzaldehyde (10.0 g, 54 mmol) in 200 mL of absolute ethanol and 50 mL of water was added 15 hydroxylamine hydrochloride (4.5 g, 64.8 mmol) and sodium hydroxide (3.25 g, 81 mmol) as a solution in water. The resulting mixture was allowed to stir at room temperature for 16 h. A white solid had fallen out of solution. The mixture was concentrated in vacuo to about half its volume 20 and the solid was collected by filtration, azeotroped with benzene and dried in vacuo to afford 9.8 g (90%) of the title compound as a white powder. ^1H NMR (DMSO-d₆) δ 8.1 (s, 1H), 7.52 (app q, 4H). MS (H₂O-GC/MS) 200/202 (M+H)+.

25

Part B. Preparation of 4-bromobenzylhydroxylamine.

To a solution of 4-bromobenzaldehyde oxime (2.0 g, 10 mmol) in 20 mL of methanol at 0° C was added borane-pyridine complex (3.75 mL of an 8M in pyridine, 30 mmol) dropwise. 30 To this solution was added 10% aqueous HCl dropwise over about 10 minutes. The resulting mixture was allowed to stir at 0° C an additional 20 minutes and then it was made basic with solid Na₂CO₃. The mixture was diluted with ethyl acetate and washed with H₂O and 10% aqueous HCl. The 35 organics were discarded and the aqueous layer was made basic with Na₂CO₃ and extracted with ethyl acetate. This ethyl acetate layer was washed with brine, dried over MgSO₄ and concentrated in vacuo to afford 1.3 g (65%) of the title

compound as a white solid. ^1H NMR (CDCl_3) δ 7.45 (d, 2H), 7.19 (d, 2H), 5.35 (broad s, 2H), 3.93 (s, 2H).

5 Part C. Preparation of *trans*-2-(4-bromobenzyl)-4- carbomethoxy-5-(3-cyanophenyl)isoxazolidine.

To a solution of methyl *trans*-3-cyanocinnamate from Example 1, Part A (0.57 g, 3.04 mmol) in 10 mL of benzene was added 4-bromobenzylhydroxylamine (0.74 g, 3.65 mmol), 10 paraformaldehyde (0.46 g, 15.2 mmol) and about 1 g of crushed 4 \AA molecular sieves. The resulting mixture was stirred at 80° C for 16 h. The reaction mixture was allowed to cool to room temperature, and was filtered through celite and diluted with ethyl acetate. The solution was washed 15 with H_2O and brine, dried over MgSO_4 and concentrated *in vacuo*. The residue was purified by flash chromatography (elution with 3:1 hexanes/ethyl acetate) to afford 0.75 g (63%) of the title compound as an oil. MS ($\text{NH}_3\text{-CI}$) 401/403 (M+H) $^+$.

20 Part D. Preparation of *trans*-2-[$(2'$ -*tert*-butylaminosulfonyl- $[1,1'$]-biphenyl-4-yl)methyl]-4- carbomethoxy-5-(3-cyanophenyl)isoxazolidine.

25 To a solution of *trans*-2-(4-bromobenzyl)-4- carbomethoxy-5-(3-cyanophenyl)isoxazolidine (0.46 g, 1.15 mmol) in 20 mL of benzene was added 2-(*tert*-butylaminosulfonyl)phenylboronic acid (0.45 g, 1.72 mmol), tetrabutylammonium bromide (0.04 g, 0.12 mmol), sodium 30 carbonate (0.36 g, 3.4 mmol) and 2 mL of H_2O . This mixture was degassed with a stream of nitrogen and then tetrakis(triphenylphosphine)palladium (0.14 g, 0.12 mmol) was added and the reaction mixture was stirred at 80° C for 6 h. The mixture was allowed to cool to room temperature 35 and then was diluted with ethyl acetate, washed with H_2O and brine, dried over MgSO_4 and was concentrated *in vacuo*. The residue was purified by flash chromatography (elution with

2:1 hexanes/ethyl acetate) to afford 0.52 g (85%) of the title compound. MS (ESI) 534.4 (M+H)+.

Part E. Preparation of *trans*-2-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-carbomethoxy-5-(3-amidinophenyl)isoxazolidine, trifluoroacetic acid salt.

A solution of *trans*-1-[(2'-tert-butylaminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-carbomethoxy-4-(3-cyanophenyl)isoxazolidine (0.52 g, 0.97 mmol) in 20 mL of trifluoroacetic acid was stirred at 70° C for 1 h and then was allowed to cool to room temperature and was concentrated in vacuo. ^1H NMR (CDCl_3) indicated complete removal of the tert-butyl group. The crude residue was dissolved in 40 mL of anhydrous methanol and was cooled to 0° C. Anhydrous HCl gas was bubbled through the solution for about 30 min (until solution saturated). The flask was then sealed and allowed to stand for 16 h at 0° C. The reaction mixture was concentrated in vacuo. The resulting solid was dissolved in 35 mL of anhydrous methanol and ammonium carbonate (0.56 g, 5.8 mmol) was added and the mixture was allowed to stir at room temperature for 24 h. The reaction mixture was concentrated in vacuo and purified by prep HPLC (C18 reverse phase column, elution with a $\text{H}_2\text{O}/\text{CH}_3\text{CN}$ gradient with 0.5% TFA) to afford 350 mg (59%) of the title compound as a white powder.. MS (ESI) 495.4 (M+H)+.

Example 22

30 *trans*-2-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-carboisopropoxy-5-(3-amidinophenyl)isoxazolidine, trifluoroacetic acid salt.

Part A. Preparation of *trans*-2-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-carboisopropoxy-5-(3-amidinophenyl)isoxazolidine, trifluoroacetic acid salt.

To a solution of *trans*-2-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-carbomethoxy-5-(3-amidinophenyl)isoxazolidine, trifluoroacetic acid salt (300 mg, 0.49 mmol) in 30 mL of isopropanol was added several 5 drops of titanium (IV) isopropoxide. The resulting mixture was stirred at 80° C for 16 h. The reaction was allowed to cool to room temperature and the solvent was removed *in vacuo*. The residue was triturated with ether and then was purified by HPLC under the conditions described in Example 10 1, Part D to afford 0.25 g (80%) of the title compound as a white powder. MS (ESI) 523.5 (M+H)+.

Example 23

15 *trans*-2-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-methoxymethyl-5-(3-amidinophenyl)isoxazolidine,
trifluoroacetic acid salt.

Part A. Preparation of *trans*-3-cyanocinnamic acid.

20 To a solution of methyl *trans*-3-cyanocinnamate (4.74 g, 25.3 mmol) in 100 mL of tetrahydrofuran and 50 mL of H₂O at room temperature was added lithium hydroxide monohydrate (2.65 g, 63.2 mmol). The resulting mixture was allowed to stir for 16 h. The tetrahydrofuran was removed *in vacuo* and the residue was diluted with saturated aqueous NaHCO₃ and washed with hexane. The organic layer was discarded. The aqueous layer was acidified and extracted with ethyl acetate. The organics were washed with brine, dried over 25 MgSO₄ and concentrated *in vacuo* to afford 4.35 g (99%) of the title compound. ¹H NMR (CDCl₃): δ 8.21 (s, 1H), 8.02 (d, 1H), 7.85 (d, 1H), 7.62 (t, 1H), 7.61 (d, 1H), 6.73 (d, 1H).

35 Part B. Preparation of *trans*-3-cyanocinnamyl alcohol.

To a solution of *trans*-3-cyanocinnamic acid (1.66 g, 9.6 mmol) in 100 mL of tetrahydrofuran at -15° C was added

triethylamine (1.3 mL, 9.6 mmol) and isobutylchloroformate (1.3 mL, 9.6 mmol). The mixture was stirred for 15 minutes and then was filtered into another flask and cooled to -15° C. Sodium borohydride (0.73 g, 19.2 mmol) was added in 2 mL of H₂O and the mixture was allowed to stir at -15° C for 20 minutes and then at room temperature for 1 h. The reaction was quenched with 10% aqueous HCl and the solvent was removed in vacuo. The residue was diluted with ethyl acetate, washed with brine, dried over MgSO₄ and concentrated in vacuo to afford 1.43 g (93%) of the title compound. ¹H NMR (CDCl₃): δ 7.59 (s, 1H), 7.57 (d, 1H), 7.49 (d, 1H), 7.40 (t, 1H), 6.60 (d, 1H), 6.40 (dt, 1H), 4.35 (m, 2H), 2.23 (broad s, 1H).

15 Part C. Preparation of *trans*-3-cyanocinnamyl alcohol methyl ether.

To a suspension of 60% sodium hydride in mineral oil (0.36 g, washed with petroleum ether before use, 9.0 mmol) in 100 mL of tetrahydrofuran was added *trans*-3-cyanocinnamyl alcohol (1.43 g, 9.0 mmol). The resulting mixture was stirred at 60° C for 1 h and then was allowed to cool to room temperature. To the resulting homogeneous solution was added methyl iodide (0.56 mL, 9.0 mmol) and the mixture was then stirred at 60° C for 16 h. The reaction was quenched with ethanol and the solvent was removed in vacuo. The residue was dissolved in ethyl acetate, washed with brine, dried over MgSO₄ and concentrated in vacuo. The residue was purified by flash chromatography (elution with 6:1 hexanes/ethyl acetate to afford 1.21 g (78%) of the title compound. ¹H NMR (CDCl₃): δ 7.59 (m, 2H), 7.45 (d, 1H), 7.39 (t, 1H), 6.57 (d, 1H), 6.30 (dt, 1H), 4.08 (dd, 2H), 3.38 (s, 3H).

35 Part D. Preparation of *trans*-2-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-methoxymethyl-5-(3-amidinophenyl)isoxazolidine, trifluoroacetic acid salt.

Following the procedures described in Example 21, Parts C-E, *trans*-3-cyanocinnamyl alcohol methyl ether was converted into the title compound which was a white powder following HPLC purification. MS (ESI) 481.3 (M+H)+.

5

Example 24 and Example 25

10 trans-1-(methylsulfonyl)-3-([2'-aminosulfonyl-[1,1']-
biphenyl-4-yl)aminocarbonyl)-4-(3-amidinophenyl)pyrrolidine,
trifluoroacetic acid salt (Example 24) and trans-1-
(methylsulfonyl)-3-([2'-tert-butylaminosulfonyl-[1,1']-
biphenyl-4-yl)aminocarbonyl)-4-(3-amidinophenyl)pyrrolidine,
trifluoroacetic acid salt. (Example 25).

15 Part A. Preparation of methyl *trans*-3-cyanocinnamate.

To a solution of 3-cyanobenzaldehyde (10.0 g, 76 mmol) in 500 mL of methylene chloride was added methyl (triphenylphosphoranylidene)acetate (25.4 g, 76 mmol). The mixture
20 was allowed to stir at room temperature for 16 h. The solvent was removed in vacuo and the residue was taken up in hexane/ethyl acetate and filtered through a large pad of silica gel. The solution was concentrated to afford 12.75 g (89%) of the cinnamate as a white solid which was
25 sufficiently pure for further reactions.

MS (H₂O-GC/MS): 188 (M+H)+.

Part B. Preparation of N-benzyl-N-(trimethylsilylmethyl)aminomethyl methyl ether.

30

To a stirred mixture of methanol (1.25 mL, 31 mmol) and 37% aqueous formaldehyde (2.56 mL, 31 mmol) at 0° C was added N-benzyl-N-(trimethylsilylmethyl)amine (5.0 g, 26 mmol) dropwise over 5 minutes. The resulting mixture was
35 stirred for 2 h. Anhydrous potassium carbonate (1.02 g, 7.4 mmol) was added and the mixture was stirred at 0° C for 30 min. The reaction mixture was diluted with water and extracted twice with ether. The combined organic extracts

were washed with brine, dried over sodium sulfate and concentrated in vacuo to afford 5.6 g (92%) of the title compound. ^1H NMR (CDCl₃): δ 7.30-7.15 (m, 5H), 3.95 (s, 2H), 3.71 (s, 2H), 3.19 (s, 3H), 2.14 (s, 2H).

5

Part C. Preparation of *trans*-1-benzyl-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine.

10 To a solution of N-benzyl-N-(trimethylsilylmethyl)aminomethyl methyl ether (1.64 g, 6.9 mmol) in 20 mL of methylene chloride at 0° C was added methyl *trans*-3-cyanocinnamate (0.99 g, 5.3 mmol) followed by trifluoroacetic acid (0.041 mL, 0.53 mmol). The mixture was allowed to warm to room temperature and was stirred for 2 h.

15 The reaction mixture was diluted with methylene chloride, washed with saturated aqueous NaHCO₃ and brine, dried over K₂CO₃ and concentrated in vacuo to afford 1.67 g (98%) of the title compound which was sufficiently pure for further reactions. MS (ESI) 321.1 (M+H)⁺.

20

Part D. Preparation of *trans*-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine, hydrochloride salt.

25 To a solution of *trans*-1-benzyl-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine (40.8 g, 127 mmol) in 600 mL of methylene chloride at 0° C was added 1-chloroethyl chloroformate (12.8 mL, 127 mmol) dropwise. After stirring for 15 min the ice bath was removed and the mixture was stirred at 40° C for 1 h. The reaction mixture was cooled 30 and concentrated in vacuo. The residue was dissolved in absolute methanol and stirred at 60° C for 1 h. The reaction mixture was cooled and concentrated in vacuo. The residue was dissolved in methylene chloride and then crashed out of solution by the addition of ether. The solid was 35 filtered and dried in vacuo to give 23.3 g (69%) of the title compound as a white solid. MS (NH₃-CI) 231.3 (M+H)⁺.

Part E. Preparation of *trans*-1-(methylsulfonyl)-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine.

To a solution of *trans*-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine, hydrochloride salt (0.50 g, 1.87 mmol) in 10 mL of methylene chloride was added methanesulfonyl chloride (0.15 mL, 1.87 mmol) and triethylamine (0.52 mL, 3.74 mmol). The resulting mixture was allowed to stir at 25° C for 16 h. The reaction was diluted with ethyl acetate, washed with 10% aq HCl, saturated aq NaHCO₃ and brine, dried (MgSO₄), filtered through a pad of silica gel and concentrated in vacuo to afford 0.54 g (93%) of the title compound which was sufficiently pure to be used directly in subsequent reactions. MS (ESI) 309.1 (M+H)⁺.

Part F. Preparation of *trans*-1-(methylsulfonyl)-3-carboxy-4-(3-cyanophenyl)pyrrolidine.

To a solution of *trans*-1-(methylsulfonyl)-3-carbomethoxy-4-(3-cyanophenyl)pyrrolidine (0.54 g, 1.75 mmol) in 10 mL of tetrahydrofuran and 5 mL of water was added lithium hydroxide monohydrate (0.15 g, 3.5 mmol). The mixture was allowed to stir at 25° C for 3 h. Added saturated aq NaHCO₃, extracted with 1:1 hexanes/ethyl acetate and discarded the organic layer. The aqueous layer was acidified with aq HCl and extracted with ethyl acetate. The organic layer was washed with brine, dried (MgSO₄) and concentrated in vacuo to afford 0.44 g (86%) of the title compound which was sufficiently pure to be used directly in subsequent reactions. MS (ESI) 295.3 (M+H)⁺.

Part G. Preparation of *trans*-1-(methylsulfonyl)-3-([2'-*tert*-butylaminosulfonyl-[1,1']-biphenyl-4-yl)aminocarbonyl]-4-(3-cyanophenyl)pyrrolidine.

To a solution of *trans*-1-(methylsulfonyl)-3-carboxy-4-(3-cyanophenyl)pyrrolidine (0.44 g, 1.5 mmol) in 15 mL of

acetonitrile was added thionyl chloride (1.1 mL, 15 mmol). This mixture was stirred at 80° C for 30 min and then cooled and concentrated *in vacuo*. The residue was dissolved in 10 mL of methylene chloride whereupon ([2'-*tert*-
5 butylaminosulfonyl-[1,1']-biphenyl-4-yl)amine (0.59 g, 1.95 mmol) and triethylamine (2.1 mL, 15 mmol) were added. The reaction mixture was allowed to stir at 25° C for 16 h. The reaction was diluted with ethyl acetate, washed with 10% aq HCl, saturated aq NaHCO₃ and brine, dried (MgSO₄), filtered
10 through a pad of silica gel and concentrated *in vacuo* to afford 0.65 g (75%) of the title compound which was sufficiently pure to be used directly in subsequent reactions. MS (ESI) 581.5 (M+H)⁺.

15 Part H. Preparation of *trans*-1-(methylsulfonyl)-3-([2'-
aminosulfonyl-[1,1']-biphenyl-4-yl)aminocarbonyl)-4-(3-
amidinophenyl)pyrrolidine, trifluoroacetic acid salt and
20 *trans*-1-(methylsulfonyl)-3-([2'-*tert*-butylaminosulfonyl-
[1,1']-biphenyl-4-yl)aminocarbonyl)-4-(3-
amidinophenyl)pyrrolidine, trifluoroacetic acid salt.

A solution of *trans*-1-(methylsulfonyl)-3-([2'-*tert*-
butylaminosulfonyl-[1,1']-biphenyl-4-yl)aminocarbonyl)-4-(3-
cyanophenyl)pyrrolidine (0.63 g, 1.08 mmol) in 50 mL of
25 anhydrous methanol was cooled to 0° C. Anhydrous HCl gas was bubbled through the solution for about 30 min (until solution saturated). The flask was then sealed and allowed to stand for 16 h at 0° C. The reaction mixture was concentrated *in vacuo*. The resulting solid was dissolved in
30 20 mL of anhydrous methanol and ammonium carbonate (0.62 g, 6.48 mmol) was added and the mixture was allowed to stir at room temperature for 24 h. The reaction mixture was concentrated *in vacuo* and 120 mg of the residue was purified by prep HPLC (C18 reverse phase column, elution with a
35 H₂O/CH₃CN gradient with 0.5% TFA) to afford 65 mg (54%) of *trans*-1-(methylsulfonyl)-3-([2'-aminosulfonyl-[1,1']-
biphenyl-4-yl)aminocarbonyl)-4-(3-amidinophenyl)pyrrolidine, trifluoroacetic acid salt as a white powder following

lyophilization. MS (ESI) 542.3 (M+H)+. There was also obtained 20 mg (17%) of *trans*-1-(methylsulfonyl)-3-([2'-*tert*-butylaminosulfonyl-[1,1']-biphenyl-4-yl)aminocarbonyl)-4-(3-amidinophenyl)pyrrolidine, trifluoroacetic acid salt as 5 a white powder following lyophilization. MS (ESI) 598.4 (M+H)+.

Example 26

10 cis-1-(methylsulfonyl)-3-([2'-aminosulfonyl-[1,1']-biphenyl-4-yl)aminocarbonyl)-4-(3-amidinophenyl)pyrrolidine, 15 trifluoroacetic acid salt.

Part A. Preparation of methyl *cis*-3-cyanocinnamate.

15 To a solution of bis(2,2,2-trifluoroethyl)(methoxycarbonylmethyl)phosphonate (5.0 g, 15.7 mmol) and 18-crown-6 (20.7 g, 78.5 mmol) in 300 mL of tetrahydrofuran at -78° C was added potassium 20 bis(trimethylsilyl)amide (31.4 mL of a 0.5 M solution in toluene, 15.7 mmol) dropwise. After the addition was complete 3-cyanobenzaldehyde (2.06 g, 15.7 mmol) was added and the resulting mixture was stirred for 30 minutes at -78° C. The reaction was quenched by the addition of saturated 25 aqueous NH₄Cl and then extracted three times with ether. The combined ether extracts were washed with brine, dried over Na₂SO₄ and concentrated in vacuo to afford 2.86 g (97%) of the product which was sufficiently pure for further reactions. ¹H NMR (CDCl₃) δ 7.85 (s, 1H), 7.76 (d, 1H), 7.60 30 (d, 1H), 7.45 (t, 1H), 6.93 (d, 1H), 6.05 (d, 1H), 3.70 (s, 3H).

35 Part B. Preparation of *cis*-1-(methylsulfonyl)-3-([2'-aminosulfonyl-[1,1']-biphenyl-4-yl)aminocarbonyl)-4-(3-amidinophenyl)pyrrolidine, trifluoroacetic acid salt.

Following the procedures described in Example 1, Parts C-H, methyl *cis*-3-cyanocinnamate was converted into the

title compound, a white powder following HPLC purification.
MS (ESI) 542.4 (M+H)+.

Example 27 and Example 28

5

trans-1-(methylsulfonyl)-3-[[5-(2'-aminosulfonylphenyl-1-yl)pyridin-2-yl]aminocarbonyl]-4-(3-amidinophenyl)pyrrolidine, trifluoroacetic acid salt (Example 27) and trans-1-(methylsulfonyl)-3-[[5-(2'-tert-butylaminosulfonylphenyl-1-yl)pyridin-2-yl]aminocarbonyl]-4-(3-amidinophenyl)pyrrolidine, trifluoroacetic acid salt (Example 28).

Part A. Preparation of trans-1-(methylsulfonyl)-3-[[5-(2'-tert-butylaminosulfonylphenyl-1-yl)pyridin-2-yl]aminocarbonyl]-4-(3-cyanophenyl)pyrrolidine.

To a solution of trans-1-(methylsulfonyl)-3-carboxy-4-(3-cyanophenyl)pyrrolidine from Example 1, Part F (0.31 g, 1.06 mmol) in 15 mL of acetonitrile was added thionyl chloride (1.26 mL, 10.6 mmol). This mixture was stirred at 80° C for 30 min and then cooled and concentrated *in vacuo*. The residue was dissolved in 10 mL of methylene chloride whereupon [[5-(2'-tert-butylaminosulfonylphenyl-1-yl)pyridin-2-yl]amine (0.41 g, 1.35 mmol) and triethylamine (1.5 mL, 10.6 mmol) were added. The reaction mixture was allowed to stir at 25° C for 16 h. The reaction was diluted with ethyl acetate, washed with 10% aq HCl, saturated aq NaHCO₃ and brine, dried (MgSO₄), filtered through a pad of silica gel and concentrated *in vacuo*. The residue was purified by flash chromatography (elution with 2:1 hexanes/ethyl acetate) to afford 0.47 g (75%) of the title compound. MS (ESI) 582.5 (M+H)+.

35 Part B. Preparation of trans-1-(methylsulfonyl)-3-[[5-(2'-aminosulfonylphenyl-1-yl)pyridin-2-yl]aminocarbonyl]-4-(3-amidinophenyl)pyrrolidine, trifluoroacetic acid salt and trans-1-(methylsulfonyl)-3-[[5-(2'-tert-

butylaminosulfonylphenyl-1-yl)pyridin-2-yl]aminocarbonyl]-4-(3-amidinophenyl)pyrrolidine, trifluoroacetic acid salt.

Following the procedures described in Example 1 and
5 Example 2, Part H, *trans*-1-(methylsulfonyl)-3-[(5-(2'-tert-
butylaminosulfonylphenyl-1-yl)pyridin-2-yl)aminocarbonyl]-4-(3-cyanophenyl)pyrrolidine was converted into the title
compounds which were isolated as white powders following
HPLC purification and lyophilization. *trans*-1-
10 (methylsulfonyl)-3-[(5-(2'-aminosulfonylphenyl-1-yl)pyridin-
2-yl)aminocarbonyl]-4-(3-amidinophenyl)pyrrolidine,
trifluoroacetic acid salt (Example 27), MS (ESI) 272.3
(M+2H)2+. *trans*-1-(methylsulfonyl)-3-[(5-(2'-tert-
butylaminosulfonylphenyl-1-yl)pyridin-2-yl)aminocarbonyl]-4-
15 (3-amidinophenyl)pyrrolidine, trifluoroacetic acid salt
(Example 28), MS (ESI) 300.3 (M+2H)2+.

Example 29

20 1-(methylsulfonyl)-3-([2'-aminosulfonyl-[1,1']-biphenyl-4-
yl)aminocarbonyl]-4-(3-amidinophenyl)-Δ³-pyrroline.
trifluoroacetic acid salt.

Part A. Preparation of ethyl 3-(3-cyanophenyl)propiolate.

25 To a solution of ethyl propiolate (5.0 g, 51 mmol) in
150 mL of tetrahydrofuran at -78° C was added *n*-butyllithium
(20.4 mL of a 2.5 M solution in hexane, 51 mmol) dropwise.
The mixture was allowed to stir for 1 h at -78° C and then
30 zinc chloride (20.9 g, 153 mmol) was added in 150 mL of
tetrahydrofuran and the resulting mixture was allowed to
stir with warming to room temperature for 30 min. The
mixture was cooled to 0° C whereupon 3-iodobenzonitrile
(5.84 g, 25.5 mmol) and *bis*triphenylphosphine palladium (II)
35 chloride (0.91 g, 1.3 mmol) were added. The resulting
mixture was allowed to stir at 50° C for 16 h. After
cooling to room temperature, the reaction was diluted with
150 mL of water and 150 mL of ether and then filtered

through a pad of celite. The filtrate was extracted twice with ether and the combined organics were dried (MgSO_4) and concentrated in vacuo. The residue was purified by flash chromatography (elution with 10:1 hexanes/ethyl acetate) to afford 2.23 g (44%) of the title compound as a solid. ^1H NMR (CDCl_3) δ 7.85 (s, 1H), 7.80 (d, 1H), 7.74 (d, 1H), 7.53 (t, 1H), 4.31 (q, 2H), 1.37 (t, 3H).

Part B. Preparation of 1-benzyl-3-carbethoxy-4-(3-cyanophenyl)- Δ^3 -pyrroline.

To a solution of N-benzyl-N-(trimethylsilylmethyl)aminomethyl methyl ether from Example 1, Part B (3.09 g, 12.9 mmol) in 40 mL of methylene chloride at 0° C was added ethyl 3-(3-cyanophenyl)propiolate (2.0 g, 10 mmol) followed by trifluoroacetic acid (0.06 mL, 0.75 mmol). The mixture was allowed to warm to room temperature and was stirred for 2 h. The reaction mixture was diluted with methylene chloride, washed with saturated aqueous NaHCO_3 and brine, dried over K_2CO_3 and concentrated in vacuo. The residue was purified by flash chromatography (elution with 3:1 hexanes/ethyl acetate) to afford 1.7 g (51%) of the title compound. MS (ESI) 333.4 ($\text{M}+\text{H}$)⁺.

Part C. Preparation of 3-carbethoxy-4-(3-cyanophenyl)- Δ^3 -pyrroline, hydrochloride salt.

Following the procedure of Example 1, Part D, 1-benzyl-3-carbethoxy-4-(3-cyanophenyl)- Δ^3 -pyrroline (1.3 g, 3.3 mmol) was converted into 0.8 g (73%) of the title compound. MS (ESI) 243.3 ($\text{M}+\text{H}$)⁺.

Part D. Preparation of 1-(methylsulfonyl)-3-carbethoxy-4-(3-cyanophenyl)- Δ^3 -pyrroline.

Following the procedure of Example 1, Part E, 3-carbethoxy-4-(3-cyanophenyl)- Δ^3 -pyrroline, hydrochloride salt (0.35 g, 1.26 mmol) was converted into 0.35 g (87%) of

the title compound. MS (ESI) 323.4 (M+H)+. ^1H NMR (CDCl_3) δ 7.62 (s, 1H), 7.58 (d, 1H), 7.50 (d, 1H), 7.42 (t, 1H), 4.50 (broad s, 4H), 4.05 (q, 2H), 2.85 (s, 3H), 1.10 (t, 3H).

5 Part E. Preparation of 1-(methylsulfonyl)-3-carboxy-4-(3-cyanophenyl)- Δ^3 -pyrroline.

To a solution of 1-(methylsulfonyl)-3-carbethoxy-4-(3-cyanophenyl)- Δ^3 -pyrroline (0.35 g, 1.1 mmol) in 5 mL of 10 methanol and 5 mL of water was added potassium hydroxide (0.12 g, 2.2 mmol). This mixture was stirred at 60° C for 2 h and then cooled to room temperature, diluted with water and extracted with 1:1 hexanes/ethyl acetate. The organics were discarded and the aqueous layer was acidified with aq 15 HCl and extracted with ethyl acetate. The organic layer was washed with brine, dried (MgSO_4) and concentrated in vacuo to afford 0.20 g (63%) of the title compound which was sufficiently pure to be used directly in subsequent reactions. MS (ESI) 293.3 (M+H)+.

20 Part F. Preparation of 1-(methylsulfonyl)-3-([2'-*tert*-butylaminosulfonyl-[1,1']-biphenyl-4-yl]aminocarbonyl)-4-(3-cyanophenyl)- Δ^3 -pyrroline.

25 Following the procedures described in Example 1, Part G, 1-(methylsulfonyl)-3-carboxy-4-(3-cyanophenyl)- Δ^3 -pyrroline (0.2 g, 0.68 mmol) was converted into 0.1 g (26%) of the title compound. MS (ESI)

30 Part G. Preparation of 1-(methylsulfonyl)-3-([2'-aminosulfonyl-[1,1']-biphenyl-4-yl]aminocarbonyl)-4-(3-amidinophenyl)- Δ^3 -pyrroline, trifluoroacetic acid salt.

35 A solution of 1-(methylsulfonyl)-3-([2'-*tert*-butylaminosulfonyl-[1,1']-biphenyl-4-yl]aminocarbonyl)-4-(3-cyanophenyl)- Δ^3 -pyrroline (93 mg, 0.16 mmol) in 30 mL of anhydrous methanol was cooled to 0° C. Anhydrous HCl gas was bubbled through the solution for about 30 min (until

solution saturated). The flask was then sealed and allowed to stand for 16 h at 0° C. The reaction mixture was concentrated in vacuo. The resulting solid was dissolved in 10 mL of anhydrous methanol and ammonium carbonate (80 mg, 5 0.8 mmol) was added and the mixture was allowed to stir at room temperature for 24 h. The reaction mixture was concentrated in vacuo and the residue was purified by prep HPLC (C18 reverse phase column, elution with a H₂O/CH₃CN gradient with 0.5% TFA) to afford 25 mg (25%) of the title 10 compound as a white powder following lyophilization. MS (ESI) 540.3 (M+H)⁺.

Example 30

15 1-(benzyl)-3-([2'-aminosulfonyl-[1,1']-biphenyl-4-
yl)aminocarbonyl)-4-(3-amidinophenyl)-Δ³-pyrroline,
bistrifluoroacetic acid salt.

Part A. Preparation of 1-(benzyl)-3-([2'-tert-
20 butylaminosulfonyl-[1,1']-biphenyl-4-yl)aminocarbonyl)-4-(3-
cyanophenyl)-Δ³-pyrroline.

To a solution of ([2'-tert-butylaminosulfonyl-[1,1']-
25 biphenyl-4-yl)amine (1.10 g, 3.6 mmol) in methylene chloride
was added trimethylaluminum dropwise (6.6 mL of a 2.0 M
solution in toluene, 13.2 mmol). The resulting solution was
stirred at 25° C for 30 min at which time gas evolution had
ceased. To this solution was then added 1-benzyl-3-
carbethoxy-4-(3-cyanophenyl)-Δ³-pyrroline from Example 6,
30 Part B (1.0 g, 3.0 mmol) as a solution in methylene
chloride. The resulting solution was stirred at 40° C for 4
h, at which time the reaction mixture was cooled to 0° C and
quenched with saturated aq NH₄Cl. The mixture was diluted
35 with ethyl acetate, washed with brine, dried (MgSO₄) and
concentrated in vacuo. The residue was purified by flash
chromatography (elution with 1:1 hexanes/ethyl acetate) to
afford 0.8 g (45%) of the title compound. MS (ESI)

Part B. Preparation of 1-(benzyl)-3-([2'-aminosulfonyl-[1,1']-biphenyl-4-yl)aminocarbonyl)-4-(3-amidinophenyl)- Δ^3 -pyrroline, bistrifluoroacetic acid salt.

5 A solution of 1-(benzyl)-3-([2'-tert-butylaminosulfonyl-[1,1']-biphenyl-4-yl)aminocarbonyl)-4-(3-cyanophenyl)- Δ^3 -pyrroline (0.13 g, 0.2 mmol) in 10 mL of trifluoroacetic acid was stirred at 70° C for 30 min and then was allowed to cool to room temperature and was
10 concentrated in vacuo. ^1H NMR (CDCl_3) indicated complete removal of the tert-butyl group. The crude residue was dissolved in 40 mL of anhydrous methanol and was cooled to 0° C. Anhydrous HCl gas was bubbled through the solution for about 30 min (until solution saturated). The flask was
15 then sealed and allowed to stand for 16 h at 0° C. The reaction mixture was concentrated in vacuo. The resulting solid was dissolved in 10 mL of anhydrous methanol and ammonium carbonate (0.10 g, 1.0 mmol) was added and the mixture was allowed to stir at room temperature for 24 h.
20 The reaction mixture was concentrated in vacuo and purified by prep HPLC (C18 reverse phase column, elution with a $\text{H}_2\text{O}/\text{CH}_3\text{CN}$ gradient with 0.5% TFA) to afford 60 mg (45%) of the title compound as a white powder. MS (ESI) 276.8 ($\text{M}+2\text{H}$) $2+$.

25

Example 31

trans-1-(methylsulfonyl)-3-([2'-aminosulfonyl-[1,1']-
biphenyl-4-yl)methylcarbonyl)-4-(3-
30 amidinophenyl)pyrrolidine, trifluoroacetic acid salt.

Part A. Preparation of *trans*-3-cyanocinnamic acid.

To a solution of methyl *trans*-3-cyanocinnamate from
35 Example 1, Part A, (4.74 g, 25.3 mmol) in 100 mL of tetrahydrofuran and 50 mL of H_2O at room temperature was added lithium hydroxide monohydrate (2.65 g, 63.2 mmol). The resulting mixture was allowed to stir for 16 h. The

tetrahydrofuran was removed in vacuo and the residue was diluted with saturated aqueous NaHCO₃ and washed with hexane. The organic layer was discarded. The aqueous layer was acidified and extracted with ethyl acetate. The 5 organics were washed with brine, dried over MgSO₄ and concentrated in vacuo to afford 4.35 g (99%) of the title compound. ¹H NMR (CDCl₃): δ 8.21 (s, 1H), 8.02 (d, 1H), 7.85 (d, 1H), 7.62 (t, 1H), 7.61 (d, 1H), 6.73 (d, 1H).

10 Part B. Preparation of *trans*-3-cyanocinnamoyl chloride.

To a solution of *trans*-3-cyanocinnamic acid (1.25 g, 7.2 mmol) in 20 mL of benzene was added thionyl chloride (5 mL, 68 mmol). The reaction was stirred at 80° C for 2 h at 15 which time gas evolution had ceased. The mixture was cooled and concentrated in vacuo and was used directly in Part C without purification or characterization.

20 Part C. Preparation of (*E*)-1-(3-cyanophenyl)-4-(4-bromophenyl)-1-buten-3-one.

To a suspension of activated zinc dust (0.71 g, 10.8 mmol) in 20 mL of tetrahydrofuran was added a few drops of 1,2-dibromoethane and the resulting mixture was heated to 25 60° C and stirred for 10 min. The reaction was cooled to 0° C and then there was added 4-bromobenzyl bromide (2.2 g, 8.64 mmol) in 10 mL of tetrahydrofuran. This mixture was stirred at 0° C for 2 h. This mixture was then added via cannula to a separate flask which contained lithium chloride 30 (0.73 g, 17.3 mmol) and copper cyanide (0.77 g, 8.64 mmol) in 10 mL of tetrahydrofuran at -78° C. This solution was warmed to -10° C, stirred for 5 min and then cooled back to -78° C. To this mixture was then added the crude *trans*-3-cyanocinnamoyl chloride from Part B in 10 mL of 35 tetrahydrofuran. The reaction was stirred with warming to room temperature for 4 h and then was quenched with saturated aq NH₄Cl. The mixture was diluted with ethyl acetate, washed with saturated aq NaHCO₃ and brine, dried

(MgSO₄) and concentrated in vacuo. The residue was purified by flash chromatography (elution with 6:1 hexanes/ethyl acetate) to afford 0.8 g (35%) of the title compound. MS (NH₃-CI) 343/345 (M+NH₄)⁺.

5

Part D. Preparation of *trans*-1-benzyl-3-[(4-bromophenyl)methylcarbonyl]-4-(3-cyanophenyl)pyrrolidine.

To a solution of (*E*)-1-(3-cyanophenyl)-4-(4-bromophenyl)-1-buten-3-one (0.5 g, 1.53 mmol) in 10 mL of methylene chloride was added N-benzyl-N-(trimethylsilylmethyl)aminomethyl methyl ether from Example 1, Part B, (0.47 g, 2.0 mmol) and trifluoroacetic acid (0.012 mL, 0.15 mmol). The resulting solution was stirred 15 at 25° C for 2 h. The reaction was diluted with ethyl acetate, washed with saturated aq NaHCO₃ and brine, dried (MgSO₄), filtered through a pad of silica gel and concentrated in vacuo to afford 0.7 g (100%) of the title compound which was sufficiently pure to be used without 20 purification. MS (ESI) 459.3/461.2 (M+H)⁺.

Part E. Preparation of *trans*-3-[(4-bromophenyl)methylcarbonyl]-4-(3-cyanophenyl)pyrrolidine, hydrochloride salt.

25

Following the procedures described in Example 1, Part D, *trans*-1-benzyl-3-[(4-bromophenyl)methylcarbonyl]-4-(3-cyanophenyl)pyrrolidine (0.7 g, 1.52 mmol) was converted into 0.5 g (82%) of the title compound which was 30 sufficiently pure to be used without purification. MS (ESI) 369/371 (M+H)⁺.

Part F. Preparation of *trans*-1-(methylsulfonyl)-3-[(4-bromophenyl)methylcarbonyl]-4-(3-cyanophenyl)pyrrolidine.

35

Following the procedures described in Example 1, Part E, *trans*-3-[(4-bromophenyl)methylcarbonyl]-4-(3-cyanophenyl)pyrrolidine, hydrochloride salt (0.5 g, 1.23

mmol) was converted into 0.25 g (45%) of the title compound following flash chromatography purification (elution with 3:1 hexanes/ethyl acetate). ^1H NMR (CDCl_3) δ 7.48 (m, 1H), 7.35-7.25 (m, 5H), 6.8 (d, 2H), 3.7-3.6 (m, 3H), 3.50 (s, 5 2H), 3.42-3.30 (m, 3H), 2.81 (s, 3H).

Part G. Preparation of *trans*-1-(methylsulfonyl)-3-([2'-*tert*-butylaminosulfonyl-[1,1']-biphenyl-4-yl)methylcarbonyl)-4-(3-cyanophenyl)pyrrolidine.

10

To a solution of *trans*-1-(methylsulfonyl)-3-[(4-bromophenyl)methylcarbonyl]-4-(3-cyanophenyl)pyrrolidine (0.25 g, 0.56 mmol) in 10 mL of benzene was added 2-(*tert*-butylaminosulfonyl)phenylboronic acid (0.29 g, 1.12 mmol), 15 tetrabutylammonium bromide (0.04 g, 0.11 mmol) and aqueous sodium carbonate (1.12 mL of a 2.0 M aq solution, 2.24 mmol). This mixture was degassed with a stream of nitrogen and then tetrakis(triphenylphosphine)palladium (0.07 g, 0.06 mmol) was added and the reaction mixture was stirred at 80° 20 C for 6 h. The mixture was allowed to cool to room temperature and then was diluted with ethyl acetate, washed with H_2O and brine, dried over MgSO_4 and was concentrated in vacuo. The residue was purified by flash chromatography (elution with 1:1 hexanes/ethyl acetate) to afford 0.22 g 25 (69%) of the title compound. MS (ESI) 580.4 ($\text{M}+\text{H})^+$.

Part H. Preparation of *trans*-1-(methylsulfonyl)-3-([2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methylcarbonyl)-4-(3-amidinophenyl)pyrrolidine, trifluoroacetic acid salt.

30

Following the procedures of Example 29, Part G, *trans*-1-(methylsulfonyl)-3-([2'-*tert*-butylaminosulfonyl-[1,1']-biphenyl-4-yl)methylcarbonyl)-4-(3-cyanophenyl)pyrrolidine (0.15 g, 0.26 mmol) converted into 35 mg (21%) of the title 35 compound as a white powder. MS (ESI) 541.4 ($\text{M}+\text{H})^+$.

Following the procedures described above, the compounds listed in Tables 1a and 1b were prepared.

Table 1a

Utility

The compounds of this invention are useful as anticoagulants for the treatment or prevention of thromboembolic disorders in mammals. The term 5 "thromboembolic disorders" as used herein includes arterial or venous cardiovascular or cerebrovascular thromboembolic disorders, including, for example, unstable angina, first or recurrent myocardial infarction, ischemic sudden death, transient ischemic attack, stroke, atherosclerosis, venous 10 thrombosis, deep vein thrombosis, thrombophlebitis, arterial embolism, coronary and cerebral arterial thrombosis, cerebral embolism, kidney embolisms, and pulmonary embolisms. The anticoagulant effect of compounds of the present invention is believed to be due to inhibition of 15 factor Xa or thrombin.

The effectiveness of compounds of the present invention as inhibitors of factor Xa was determined using purified human factor Xa and synthetic substrate. The rate of factor Xa hydrolysis of chromogenic substrate S2222 (Kabi 20 Pharmacia, Franklin, OH) was measured both in the absence and presence of compounds of the present invention. Hydrolysis of the substrate resulted in the release of pNA, which was monitored spectrophotometrically by measuring the increase in absorbance at 405 nm. A decrease in the rate of 25 absorbance change at 405 nm in the presence of inhibitor is indicative of enzyme inhibition. The results of this assay are expressed as inhibitory constant, K_i .

Factor Xa determinations were made in 0.10 M sodium phosphate buffer, pH 7.5, containing 0.20 M NaCl, and 0.5 % 30 PEG 8000. The Michaelis constant, K_m , for substrate hydrolysis was determined at 25°C using the method of Lineweaver and Burk. Values of K_i were determined by allowing 0.2-0.5 nM human factor Xa (Enzyme Research Laboratories, South Bend, IN) to react with the substrate 35 (0.20 mM-1 mM) in the presence of inhibitor. Reactions were allowed to go for 30 minutes and the velocities (rate of absorbance change vs time) were measured in the time frame

of 25-30 minutes. The following relationship was used to calculate K_i values:

$$(v_0 - v_s) / v_s = I / (K_i (1 + S / K_m))$$

where:

5 v_0 is the velocity of the control in the absence of inhibitor;
 v_s is the velocity in the presence of inhibitor;
 I is the concentration of inhibitor;
 K_i is the dissociation constant of the enzyme:inhibitor
10 complex;
 S is the concentration of substrate;
 K_m is the Michaelis constant.

Using the methodology described above, a number of compounds of the present invention were found to exhibit a K_i of ≤ 1 μM , thereby confirming the utility of the compounds of the 15 present invention as effective Xa inhibitors.

The antithrombotic effect of compounds of the present invention can be demonstrated in a rabbit arterio-venous (AV) shunt thrombosis model. In this model, rabbits 20 weighing 2-3 kg anesthetized with a mixture of xylazine (10 mg/kg i.m.) and ketamine (50 mg/kg i.m.) are used. A saline-filled AV shunt device is connected between the femoral arterial and the femoral venous cannulae. The AV shunt device consists of a piece of 6-cm tygon tubing which 25 contains a piece of silk thread. Blood will flow from the femoral artery via the AV-shunt into the femoral vein. The exposure of flowing blood to a silk thread will induce the formation of a significant thrombus. After forty minutes, the shunt is disconnected and the silk thread covered with 30 thrombus is weighed. Test agents or vehicle will be given (i.v., i.p., s.c., or orally) prior to the opening of the AV shunt. The percentage inhibition of thrombus formation is determined for each treatment group. The ID₅₀ values (dose which produces 50% inhibition of thrombus formation) are 35 estimated by linear regression.

The compounds of formula (I) may also be useful as inhibitors of serine proteases, notably human thrombin, plasma kallikrein and plasmin. Because of their inhibitory

action, these compounds are indicated for use in the prevention or treatment of physiological reactions, blood coagulation and inflammation, catalyzed by the aforesaid class of enzymes. Specifically, the compounds have utility 5 as drugs for the treatment of diseases arising from elevated thrombin activity such as myocardial infarction, and as reagents used as anticoagulants in the processing of blood to plasma for diagnostic and other commercial purposes.

Some compounds of the present invention were shown to 10 be direct acting inhibitors of the serine protease thrombin by their ability to inhibit the cleavage of small molecule substrates by thrombin in a purified system. *In vitro* inhibition constants were determined by the method described by Kettner et al. in *J. Biol. Chem.* **265**, 18289-18297 (1990), 15 herein incorporated by reference. In these assays, thrombin-mediated hydrolysis of the chromogenic substrate S2238 (Helena Laboratories, Beaumont, TX) was monitored spectrophotometrically. Addition of an inhibitor to the assay mixture results in decreased absorbance and is 20 indicative of thrombin inhibition. Human thrombin (Enzyme Research Laboratories, Inc., South Bend, IN) at a concentration of 0.2 nM in 0.10 M sodium phosphate buffer, pH 7.5, 0.20 M NaCl, and 0.5% PEG 6000, was incubated with various substrate concentrations ranging from 0.20 to 0.02 25 mM. After 25 to 30 minutes of incubation, thrombin activity was assayed by monitoring the rate of increase in absorbance at 405 nm which arises owing to substrate hydrolysis. Inhibition constants were derived from reciprocal plots of the reaction velocity as a function of substrate 30 concentration using the standard method of Lineweaver and Burk. Using the methodology described above, some compounds of this invention were evaluated and found to exhibit a K_i of less than 5 μM .

The compounds of the present invention can be 35 administered alone or in combination with one or more additional therapeutic agents. These include other anti-coagulant or coagulation inhibitory agents, anti-platelet or

platelet inhibitory agents, thrombin inhibitors, or thrombolytic or fibrinolytic agents.

The compounds are administered to a mammal in a therapeutically effective amount. By "therapeutically effective amount" it is meant an amount of a compound of Formula I that, when administered alone or in combination with an additional therapeutic agent to a mammal, is effective to prevent or ameliorate the thromboembolic disease condition or the progression of the disease.

By "administered in combination" or "combination therapy" it is meant that the compound of Formula I and one or more additional therapeutic agents are administered concurrently to the mammal being treated. When administered in combination each component may be administered at the same time or sequentially in any order at different points in time. Thus, each component may be administered separately but sufficiently closely in time so as to provide the desired therapeutic effect. Other anticoagulant agents (or coagulation inhibitory agents) that may be used in combination with the compounds of this invention include warfarin and heparin, as well as other factor Xa inhibitors such as those described in the publications identified above under Background of the Invention.

The term anti-platelet agents (or platelet inhibitory agents), as used herein, denotes agents that inhibit platelet function such as by inhibiting the aggregation, adhesion or granular secretion of platelets. Such agents include, but are not limited to, the various known non-steroidal anti-inflammatory drugs (NSAIDS) such as aspirin, ibuprofen, naproxen, sulindac, indomethacin, mefenamate, droxicam, diclofenac, sulfinpyrazone, and piroxicam, including pharmaceutically acceptable salts or prodrugs thereof. Of the NSAIDS, aspirin (acetylsalicylic acid or ASA), and piroxicam are preferred. Other suitable anti-platelet agents include ticlopidine, including pharmaceutically acceptable salts or prodrugs thereof. Ticlopidine is also a preferred compound since it is known to be gentle on the gastro-intestinal tract in use. Still

other suitable platelet inhibitory agents include IIb/IIIa antagonists, thromboxane-A2-receptor antagonists and thromboxane-A2-synthetase inhibitors, as well as pharmaceutically acceptable salts or prodrugs thereof.

5 The term thrombin inhibitors (or anti-thrombin agents), as used herein, denotes inhibitors of the serine protease thrombin. By inhibiting thrombin, various thrombin-mediated processes, such as thrombin-mediated platelet activation (that is, for example, the aggregation of platelets, and/or 10 the granular secretion of plasminogen activator inhibitor-1 and/or serotonin) and/or fibrin formation are disrupted. A number of thrombin inhibitors are known to one of skill in the art and these inhibitors are contemplated to be used in combination with the present compounds. Such inhibitors 15 include, but are not limited to, boroarginine derivatives, boropeptides, heparins, hirudin and argatroban, including pharmaceutically acceptable salts and prodrugs thereof. Boroarginine derivatives and boropeptides include N-acetyl and peptide derivatives of boronic acid, such as C-terminal 20 a-aminoboronic acid derivatives of lysine, ornithine, arginine, homoarginine and corresponding isothiouronium analogs thereof. The term hirudin, as used herein, includes suitable derivatives or analogs of hirudin, referred to herein as hirulogs, such as disulfatohirudin. Boropeptide 25 thrombin inhibitors include compounds described in Kettner et al., U.S. Patent No. 5,187,157 and European Patent Application Publication Number 293 881 A2, the disclosures of which are hereby incorporated herein by reference. Other suitable boroarginine derivatives and boropeptide thrombin 30 inhibitors include those disclosed in PCT Application Publication Number 92/07869 and European Patent Application Publication Number 471,651 A2, the disclosures of which are hereby incorporated herein by reference.

35 The term thrombolytics (or fibrinolytic) agents (or thrombolytics or fibrinolytics), as used herein, denotes agents that lyse blood clots (thrombi). Such agents include tissue plasminogen activator, anistreplase, urokinase or streptokinase, including pharmaceutically acceptable salts

or prodrugs thereof. The term anistreplase, as used herein, refers to anisoylated plasminogen streptokinase activator complex, as described, for example, in European Patent Application No. 028,489, the disclosure of which is hereby 5 incorporated herein by reference herein. The term urokinase, as used herein, is intended to denote both dual and single chain urokinase, the latter also being referred to herein as prourokinase.

Administration of the compounds of Formula I of the 10 invention in combination with such additional therapeutic agent, may afford an efficacy advantage over the compounds and agents alone, and may do so while permitting the use of lower doses of each. A lower dosage minimizes the potential of side effects, thereby providing an increased margin of 15 safety.

The compounds of the present invention are also useful as standard or reference compounds, for example as a quality standard or control, in tests or assays involving the inhibition of factor Xa. Such compounds may be provided in 20 a commercial kit, for example, for use in pharmaceutical research involving factor Xa. For example, a compound of the present invention could be used as a reference in an assay to compare its known activity to a compound with an unknown activity. This would ensure the experimenter that 25 the assay was being performed properly and provide a basis for comparison, especially if the test compound was a derivative of the reference compound. When developing new assays or protocols, compounds according to the present invention could be used to test their effectiveness.

30 The compounds of the present invention may also be used in diagnostic assays involving factor Xa. For example, the presence of factor Xa in an unknown sample could be determined by addition of chromogenic substrate S2222 to a series of solutions containing test sample and optionally 35 one of the compounds of the present invention. If production of pNA is observed in the solutions containing test sample, but no compound of the present invention, then one would conclude factor Xa was present.

Dosage and Formulation

The compounds of this invention can be administered in such oral dosage forms as tablets, capsules (each of which includes sustained release or timed release formulations), pills, powders, granules, elixirs, tinctures, suspensions, syrups, and emulsions. They may also be administered in intravenous (bolus or infusion), intraperitoneal, subcutaneous, or intramuscular form, all using dosage forms well known to those of ordinary skill in the pharmaceutical arts. They can be administered alone, but generally will be administered with a pharmaceutical carrier selected on the basis of the chosen route of administration and standard pharmaceutical practice.

The dosage regimen for the compounds of the present invention will, of course, vary depending upon known factors, such as the pharmacodynamic characteristics of the particular agent and its mode and route of administration; the species, age, sex, health, medical condition, and weight of the recipient; the nature and extent of the symptoms; the kind of concurrent treatment; the frequency of treatment; the route of administration, the renal and hepatic function of the patient, and the effect desired. A physician or veterinarian can determine and prescribe the effective amount of the drug required to prevent, counter, or arrest the progress of the thromboembolic disorder.

By way of general guidance, the daily oral dosage of each active ingredient, when used for the indicated effects, will range between about 0.001 to 1000 mg/kg of body weight, preferably between about 0.01 to 100 mg/kg of body weight per day, and most preferably between about 1.0 to 20 mg/kg/day. Intravenously, the most preferred doses will range from about 1 to about 10 mg/kg/minute during a constant rate infusion. Compounds of this invention may be administered in a single daily dose, or the total daily dosage may be administered in divided doses of two, three, or four times daily.

Compounds of this invention can be administered in intranasal form via topical use of suitable intranasal vehicles, or via transdermal routes, using transdermal skin patches. When administered in the form of a transdermal delivery system, the dosage administration will, of course, be continuous rather than intermittent throughout the dosage regimen.

The compounds are typically administered in admixture with suitable pharmaceutical diluents, excipients, or carriers (collectively referred to herein as pharmaceutical carriers) suitably selected with respect to the intended form of administration, that is, oral tablets, capsules, elixirs, syrups and the like, and consistent with conventional pharmaceutical practices.

For instance, for oral administration in the form of a tablet or capsule, the active drug component can be combined with an oral, non-toxic, pharmaceutically acceptable, inert carrier such as lactose, starch, sucrose, glucose, methyl cellulose, magnesium stearate, dicalcium phosphate, calcium sulfate, mannitol, sorbitol and the like; for oral administration in liquid form, the oral drug components can be combined with any oral, non-toxic, pharmaceutically acceptable inert carrier such as ethanol, glycerol, water, and the like. Moreover, when desired or necessary, suitable binders, lubricants, disintegrating agents, and coloring agents can also be incorporated into the mixture. Suitable binders include starch, gelatin, natural sugars such as glucose or beta-lactose, corn sweeteners, natural and synthetic gums such as acacia, tragacanth, or sodium alginate, carboxymethylcellulose, polyethylene glycol, waxes, and the like. Lubricants used in these dosage forms include sodium oleate, sodium stearate, magnesium stearate, sodium benzoate, sodium acetate, sodium chloride, and the like. Disintegrators include, without limitation, starch, methyl cellulose, agar, bentonite, xanthan gum, and the like.

The compounds of the present invention can also be administered in the form of liposome delivery systems, such

as small unilamellar vesicles, large unilamellar vesicles, and multilamellar vesicles. Liposomes can be formed from a variety of phospholipids, such as cholesterol, stearylamine, or phosphatidylcholines.

5 Compounds of the present invention may also be coupled with soluble polymers as targetable drug carriers. Such polymers can include polyvinylpyrrolidone, pyran copolymer, polyhydroxypropylmethacrylamide-phenol, polyhydroxyethylaspartamidephenol, or polyethyleneoxide-
10 polylysine substituted with palmitoyl residues. Furthermore, the compounds of the present invention may be coupled to a class of biodegradable polymers useful in achieving controlled release of a drug, for example, polylactic acid, polyglycolic acid, copolymers of polylactic
15 and polyglycolic acid, polyepsilon caprolactone, polyhydroxy butyric acid, polyorthoesters, polyacetals, polydihydropyrans, polycyanoacylates, and crosslinked or amphipathic block copolymers of hydrogels.

20 Dosage forms (pharmaceutical compositions) suitable for administration may contain from about 1 milligram to about 100 milligrams of active ingredient per dosage unit. In these pharmaceutical compositions the active ingredient will ordinarily be present in an amount of about 0.5-95% by weight based on the total weight of the composition.

25 Gelatin capsules may contain the active ingredient and powdered carriers, such as lactose, starch, cellulose derivatives, magnesium stearate, stearic acid, and the like. Similar diluents can be used to make compressed tablets. Both tablets and capsules can be manufactured as sustained
30 release products to provide for continuous release of medication over a period of hours. Compressed tablets can be sugar coated or film coated to mask any unpleasant taste and protect the tablet from the atmosphere, or enteric coated for selective disintegration in the gastrointestinal tract.

35 Liquid dosage forms for oral administration can contain coloring and flavoring to increase patient acceptance.

In general, water, a suitable oil, saline, aqueous dextrose (glucose), and related sugar solutions and glycols such as propylene glycol or polyethylene glycols are suitable carriers for parenteral solutions. Solutions for 5 parenteral administration preferably contain a water soluble salt of the active ingredient, suitable stabilizing agents, and if necessary, buffer substances. Antioxidizing agents such as sodium bisulfite, sodium sulfite, or ascorbic acid, either alone or combined, are suitable stabilizing agents. 10 Also used are citric acid and its salts and sodium EDTA. In addition, parenteral solutions can contain preservatives, such as benzalkonium chloride, methyl- or propyl-paraben, and chlorobutanol.

Suitable pharmaceutical carriers are described in 15 Remington's Pharmaceutical Sciences, Mack Publishing Company, a standard reference text in this field.

Representative useful pharmaceutical dosage-forms for administration of the compounds of this invention can be illustrated as follows:

20 Capsules

A large number of unit capsules can be prepared by filling standard two-piece hard gelatin capsules each with 100 milligrams of powdered active ingredient, 150 milligrams of lactose, 50 milligrams of cellulose, and 6 milligrams 25 magnesium stearate.

Soft Gelatin Capsules

A mixture of active ingredient in a digestable oil such as soybean oil, cottonseed oil or olive oil may be prepared and injected by means of a positive displacement 30 pump into gelatin to form soft gelatin capsules containing 100 milligrams of the active ingredient. The capsules should be washed and dried.

Tablets

Tablets may be prepared by conventional procedures so 35 that the dosage unit is 100 milligrams of active ingredient, 0.2 milligrams of colloidal silicon dioxide, 5 milligrams of magnesium stearate, 275 milligrams of microcrystalline cellulose, 11 milligrams of starch and 98.8 milligrams of

lactose. Appropriate coatings may be applied to increase palatability or delay absorption.

Injectable

A parenteral composition suitable for administration by injection may be prepared by stirring 1.5% by weight of active ingredient in 10% by volume propylene glycol and water. The solution should be made isotonic with sodium chloride and sterilized.

Suspension

An aqueous suspension can be prepared for oral administration so that each 5 mL contain 100 mg of finely divided active ingredient, 200 mg of sodium carboxymethyl cellulose, 5 mg of sodium benzoate, 1.0 g of sorbitol solution, U.S.P., and 0.025 mL of vanillin.

Where the compounds of this invention are combined with other anticoagulant agents, for example, a daily dosage may be about 0.1 to 100 milligrams of the compound of Formula I and about 1 to 7.5 milligrams of the second anticoagulant, per kilogram of patient body weight. For a tablet dosage form, the compounds of this invention generally may be present in an amount of about 5 to 10 milligrams per dosage unit, and the second anti-coagulant in an amount of about 1 to 5 milligrams per dosage unit.

Where the compounds of Formula I are administered in combination with an anti-platelet agent, by way of general guidance, typically a daily dosage may be about 0.01 to 25 milligrams of the compound of Formula I and about 50 to 150 milligrams of the anti-platelet agent, preferably about 0.1 to 1 milligrams of the compound of Formula I and about 1 to 3 milligrams of antiplatelet agents, per kilogram of patient body weight.

Where the compounds of Formula I are administered in combination with thrombolytic agent, typically a daily dosage may be about 0.1 to 1 milligrams of the compound of Formula I, per kilogram of patient body weight and, in the case of the thrombolytic agents, the usual dosage of the thrombolytic agent when administered alone may be reduced by about 70-80% when administered with a compound of Formula I.

Where two or more of the foregoing second therapeutic agents are administered with the compound of Formula I, generally the amount of each component in a typical daily dosage and typical dosage form may be reduced relative to 5 the usual dosage of the agent when administered alone, in view of the additive or synergistic effect of the therapeutic agents when administered in combination.

Particularly when provided as a single dosage unit, the potential exists for a chemical interaction between the 10 combined active ingredients. For this reason, when the compound of Formula I and a second therapeutic agent are combined in a single dosage unit they are formulated such that although the active ingredients are combined in a single dosage unit, the physical contact between the active 15 ingredients is minimized (that is, reduced). For example, one active ingredient may be enteric coated. By enteric coating one of the active ingredients, it is possible not only to minimize the contact between the combined active ingredients, but also, it is possible to control the release 20 of one of these components in the gastrointestinal tract such that one of these components is not released in the stomach but rather is released in the intestines. One of the active ingredients may also be coated with a material which effects a sustained-release throughout the 25 gastrointestinal tract and also serves to minimize physical contact between the combined active ingredients.

Furthermore, the sustained-released component can be additionally enteric coated such that the release of this component occurs only in the intestine. Still another 30 approach would involve the formulation of a combination product in which the one component is coated with a sustained and/or enteric release polymer, and the other component is also coated with a polymer such as a low-viscosity grade of hydroxypropyl methylcellulose (HPMC) or 35 other appropriate materials as known in the art, in order to further separate the active components. The polymer coating serves to form an additional barrier to interaction with the other component.

These as well as other ways of minimizing contact between the components of combination products of the present invention, whether administered in a single dosage form or administered in separate forms but at the same time 5 by the same manner, will be readily apparent to those skilled in the art, once armed with the present disclosure.

Obviously, numerous modifications and variations of the present invention are possible in light of the above teachings. It is therefore to be understood that within the 10 scope of the appended claims, the invention may be practiced otherwise than as specifically described herein.

WHAT IS CLAIMED AS NEW AND DESIRED TO BE SECURED BY LETTER
PATENT OF UNITED STATES IS:

1. A compound of formula I:

5

I

or stereoisomers or pharmaceutically acceptable salts
 thereof, wherein;

10

one of D and D' is selected from CN, C(=NR⁷)NR⁸R⁹,
 NHC(=NR⁷)NR⁸R⁹, NR⁸CH(=NR⁷), C(O)NR⁸R⁹, and (CH₂)_tNR⁸R⁹
 and the other is H;

15

Z is selected from CH₂, C=O, CH₂C(O), C(O)O, CONH, CH₂NH₂,
 CH₂O, SO₂, and SO₂NH;

20

J¹ and J² are independently selected from O and CH₂, provided
 that if J¹ is O, then J² is CH₂ and if J² is O, then J¹
 is CH₂;

R is selected from CO₂R¹, COR¹, OR¹, NR²R^{2a}, CONR²R^{2a},
 S(O)_pR^{1a}, and S(O)_pNR²R^{2a};

25

R^a is selected from H and C₁₋₄ alkyl;

R^b is H;

30

when J¹ and J² are CH₂, then R^a and R^b can combine to form a
 bond;

R¹ is selected from:

H,
C₁₋₄ alkyl substituted with 0-1 R³,
C₃₋₆ carbocyclic residue substituted with 0-2 R⁴, and
5-6 membered heterocyclic system containing from 1-4
5 heteroatoms selected from the group consisting of N, O,
and S substituted with 0-2 R⁴;

R^{1a} is selected from:
C₁₋₄ alkyl substituted with 0-1 R³,
10 C₃₋₆ carbocyclic residue substituted with 0-2 R⁴, and
5-6 membered heterocyclic system containing from 1-4
heteroatoms selected from the group consisting of N, O,
and S substituted with 0-2 R⁴;
15 R² and R^{2a} are independently selected from H, C₁₋₄ alkyl, and
phenyl;

20 R² and R^{2a} may be taken together to form a 5 or 6 membered
ring substituted with 0-2 R⁴ which may contain from 0-1
heteroatoms selected from the group consisting of N, O,
and S;

R^{2a} may also be C₁₋₄ alkoxy;
25 R³ is selected from:
phenyl substituted with 0-2 R⁴, and
5-6 membered heterocyclic system containing from 1-4
heteroatoms selected from the group consisting of N, O,
and S substituted with 0-2 R⁴;

30 A is selected from:
C₃₋₁₃ carbocyclic residue substituted with 0-2 R⁴, and
5-10 membered heterocyclic system containing from 1-4
heteroatoms selected from the group consisting of N, O, and
35 S substituted with 0-2 R⁴;

B is selected from:
X-Y, NR²R^{2a}, C(=NR²)NR²R^{2a}, NR²C(=NR²)NR²R^{2a},

benzyl substituted with 0-2 R^{4a},
 C₃-10 carbocyclic residue substituted with 0-2 R^{4a}, and
 5-10 membered heterocyclic system containing from 1-4
 heteroatoms selected from the group consisting of N, O, and
 5 S substituted with 0-2 R⁴, provided that B is other than
 tetrazol-5-yl;

X is selected from C₁-4 alkylene, -C(O)-, -C(O)CR²R^{2a}-,
 -CR²R^{2a}C(O), -S(O)_p-, -S(O)_pCR²R^{2a}-, -CR²R^{2a}S(O)_p-,
 10 -S(O)₂NR²-, -NR²S(O)₂-, -NR²S(O)₂CR²R^{2a}-,
 -CR²R^{2a}S(O)₂NR²-, -NR²S(O)₂NR²-, -C(O)NR²-, -NR²C(O)-,
 -C(O)NR²CR²R^{2a}-, -NR²C(O)CR²R^{2a}-, -CR²R^{2a}C(O)NR²-,
 -CR²R^{2a}NR²C(O)-, -NR²C(O)O-, -OC(O)NR²-, -NR²C(O)NR²-,
 -NR²-, -NR²CR²R^{2a}-, -CR²R^{2a}NR²-, O, -CR²R^{2a}O-, -OCR²R^{2a}-,
 15 and S;

Y is selected from:
 C₃-10 carbocyclic residue substituted with 0-2 R⁴, and
 5-10 membered heterocyclic system containing from 1-4
 20 heteroatoms selected from the group consisting of N, O, and
 S substituted with 0-2 R⁴, provided that Y is other than
 tetrazol-5-yl;

R⁴ is selected from OH, (CH₂)_rOR², halo, C₁-4 alkyl, CN, NO₂,
 25 (CH₂)_rNR²R^{2a}, (CH₂)_rC(O)R², NR²C(O)R^{2a}, NR²C(O)NR²R^{2a},
 CH(=NH)NH₂, NHC(=NH)NH₂, SO₂NR²R^{2a}, NR²SO₂NR²R^{2a}, NR²SO₂-
 C₁-4 alkyl, NR²SO₂R⁵, S(O)_pR^{1a}, and CF₃;

R^{4a} is selected from OH, halo, C₁-4 alkyl, NO₂, (CH₂)_rNR²R^{2a},
 30 (CH₂)_rC(O)R², NR²C(O)R^{2a}, NR²C(O)NR²R^{2a}, CH(=NH)NH₂,
 NHC(=NH)NH₂, SO₂NR²R^{2a}, NR²SO₂NR²R^{2a}, NR²SO₂-C₁-4 alkyl,
 NR²SO₂R⁵, S(O)_pR^{1a}, and CF₃;

R⁵ is selected from:
 35 C₃-10 carbocyclic residue substituted with 0-2 R⁶, and
 5-10 membered heterocyclic system containing from 1-4
 heteroatoms selected from the group consisting of N, O, and
 S substituted with 0-2 R⁶;

R⁶ is selected from H, OH, (CH₂)_rOR², halo, C₁₋₄ alkyl, CN,

NO₂, (CH₂)_rNR²R^{2a}, (CH₂)_rC(O)R², NR²C(O)R^{2a},

NR²C(O)NR²R^{2a}, CH(=NH)NH₂, NHC(=NH)NH₂, SO₂NR²R^{2a},

5 NR²SO₂NR²R^{2a}, and NR²SO₂C₁₋₄ alkyl;

R⁷ is selected from H, OH, C₁₋₆ alkyl, C₁₋₆ alkylcarbonyl, C₁₋

6 alkoxy, C₁₋₄ alkoxy carbonyl, C₆₋₁₀ aryloxy, C₆₋₁₀

aryloxy carbonyl, C₆₋₁₀ arylmethylcarbonyl, C₁₋₄

10 alkylcarbonyloxy C₁₋₄ alkoxy carbonyl, C₆₋₁₀

arylcarbonyloxy C₁₋₄ alkoxy carbonyl, C₁₋₆

alkylaminocarbonyl, phenylaminocarbonyl, and phenyl C₁₋₄

alkoxy carbonyl;

15 R⁸ is selected from H, C₁₋₆ alkyl and (CH₂)_n-phenyl;

R⁹ is selected from H, C₁₋₆ alkyl and (CH₂)_n-phenyl;

n is selected from 0, 1, 2, and 3;

20 m is selected from 0, 1, and 2;

p is selected from 0, 1, and 2; and,

25 r is selected from 0, 1, and 2;

provided that if B is tetrazolyl, R⁴ is present.

30 2. A compound according to Claim 1, wherein the compound is of formula Ia:

Ia

or a stereoisomer or pharmaceutically acceptable salt form thereof, wherein;

5

Z is selected from CH_2 , $\text{C}=\text{O}$, $\text{C}(\text{O})\text{O}$, and SO_2 .

3. A compound according to Claim 2, wherein;
10

one of D and D' is $\text{C}(\text{=NR}^7)\text{NH}_2$ and the other is H;

B is selected from:

X-Y, NR^2R^{2a} ,

15 benzyl substituted with 0-2 R^{4a} ,
 C_{3-10} carbocyclic residue substituted with 0-2 R^{4a} , and
 5-10 membered heterocyclic system containing from 1-4
heteroatoms selected from the group consisting of N, O, and
S substituted with 0-2 R^4 , provided that B is other than
20 tetrazol-5-yl;

X is selected from C_{1-4} alkylene, $-\text{C}(\text{O})-$, $-\text{C}(\text{O})\text{CR}^2\text{R}^{2a}-$,
 $-\text{CR}^2\text{R}^{2a}\text{C}(\text{O})$, $-\text{S}(\text{O})_p-$, $-\text{S}(\text{O})_p\text{CR}^2\text{R}^{2a}-$, $-\text{CR}^2\text{R}^{2a}\text{S}(\text{O})_p-$,
 $-\text{S}(\text{O})_2\text{NR}^2-$, $-\text{NR}^2\text{S}(\text{O})_2-$, $-\text{C}(\text{O})\text{NR}^2-$, $-\text{NR}^2\text{C}(\text{O})-$, $-\text{NR}^2-$,
25 $-\text{NR}^2\text{CR}^2\text{R}^{2a}-$, $-\text{CR}^2\text{R}^{2a}\text{NR}^2-$, O, $-\text{CR}^2\text{R}^{2a}\text{O}-$, and $-\text{OCR}^2\text{R}^{2a}-$;

R^4 is selected from OH, $(\text{CH}_2)_r\text{OR}^2$, halo, C_{1-4} alkyl, CN, NO_2 ,
 $(\text{CH}_2)_r\text{NR}^2\text{R}^{2a}$, $(\text{CH}_2)_r\text{C}(\text{O})\text{R}^2$, $\text{NR}^2\text{C}(\text{O})\text{R}^{2a}$, $\text{NR}^2\text{C}(\text{O})\text{NR}^2\text{R}^{2a}$,
 $\text{CH}(\text{=NH})\text{NH}_2$, $\text{NHC}(\text{=NH})\text{NH}_2$, $\text{SO}_2\text{NR}^2\text{R}^{2a}$, $\text{NR}^2\text{SO}_2\text{NR}^2\text{R}^{2a}$, NR^2SO_2- ,
30 C_{1-4} alkyl, $\text{S}(\text{O})_p\text{R}^{1a}$, and CF_3 ;

R^{4a} is selected from OH, halo, C₁₋₄ alkyl, NO₂, (CH₂)_rNR²R^{2a}, (CH₂)_rC(O)R², NR²C(O)R^{2a}, NR²C(O)NR²R^{2a}, CH(=NH)NH₂, NHC(=NH)NH₂, SO₂NR²R^{2a}, NR²SO₂NR²R^{2a}, NR²SO₂-C₁₋₄ alkyl, S(O)_pR^{1a}, and CF₃; and,

5

n is selected from 0 and 1.

4. A compound according to Claim 3, wherein the
10 compound is of formula II:

II

or a stereoisomer or pharmaceutically acceptable salt form
15 thereof, wherein;

R is selected from CO₂R¹, COR¹, OR¹, CONR²R^{2a}, S(O)_pR^{1a}, and
S(O)_pNR²R^{2a};

20 R¹ and R^{1a} are independently selected from:

C₁₋₄ alkyl substituted with 0-1 R³,

C₃₋₆ carbocyclic residue substituted with 0-2 R⁴, and

5-6 membered heterocyclic system containing from 1-4
heteroatoms selected from the group consisting of N, O,
25 and S substituted with 0-2 R⁴;

X is selected from C₁₋₄ alkylene, -C(O)-, -S(O)_p-, -NR²-, and
O; and,

30 m is selected from 0 and 1.

5. A compound according to Claim 4, wherein;

R is selected from CO_2R^1 , COR^1 , OR^1 , and $\text{CONR}^2\text{R}^2\text{a}$;5 R^1 and R^1a are independently selected from:
 C_{1-4} alkyl substituted with 0-1 R^3 , and
 C_{3-6} carbocyclic residue substituted with 0-2 R^4 ; and,10 R^2 and R^2a may be taken together to form a 5 or 6 membered
ring substituted with 0-2 R^4 .

6. A compound according to Claim 5, wherein ;

15 R^a is selected from H and C_{1-4} alkyl; R^1 and R^1a are independently selected from C_{1-4} alkyl
substituted with 0-1 R^3 ;20 R^3 is phenyl substituted with 0-2 R^4 ; and,Y is a C_{3-10} carbocyclic residue substituted with 0-2 R^4 .25 7. A compound according to Claim 6, wherein the compound or
pharmaceutically acceptable salt form thereof is selected from the
group consisting of:30 $\text{trans-1-(4-amidinophenyl)methyl-3-carbomethoxy-4-(3-}$
 $\text{amidinophenyl)pyrrolidine;}$ $\text{trans-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-}$
 $\text{carbomethoxy-4-(3-amidinophenyl)pyrrolidine;}$ 35 $(3S,4R)-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-$
 $\text{carbomethoxy-4-(3-amidinophenyl)pyrrolidine;}$

(3*R*,4*S*)-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine;

5 *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-(3-amidinophenyl)pyrrolidin-3-ylcarboxylic acid

10 *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-(3-amidinophenyl)pyrrolidin-3-ylcarboxylic amide

15 *cis*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine;

20 *cis*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-(3-amidinophenyl)pyrrolidin-3-ylcarboxylic acid

25 *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-carboisopropoxy-4-(3-amidinophenyl)pyrrolidine;

30 *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-3-carbobutoxy-4-(3-amidinophenyl)pyrrolidine;

35 *trans*-1-[(2-(2-cyanophenylthio)phenyl)carbonyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine;

40 *trans*-1-[(2-(2-cyanophenylthio)phenyl)methyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine;

45 *trans*-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)sulfonyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine;

trans-1-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)sulfonyl]-3-carboisopropoxy-4-(3-amidinophenyl)pyrrolidine;

5 *trans*-1-[9-fluorenylmethoxycarbonyl]-3-carbomethoxy-4-(3-amidinophenyl)pyrrolidine;

trans-2-benzyl-4-carbomethoxy-5-(3-amidinophenyl)isoxazolidine;

10 *trans*-2-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-carbomethoxy-5-(3-amidinophenyl)isoxazolidine;

trans-2-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-carboisopropoxy-5-(3-amidinophenyl)isoxazolidine; and,

15

trans-2-[(2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methyl]-4-methoxymethyl-5-(3-amidinophenyl)isoxazolidine.

20 8. A compound according to Claim 1, wherein the compound is of formula Ib:

25 or a stereoisomer or pharmaceutically acceptable salt form thereof.

30 9. A compound according to Claim 8, wherein;

one of D and D' is C(=NR⁷)NH₂ and the other is H;

B is selected from:

X-Y, NR²R^{2a},

benzyl substituted with 0-2 R^{4a},

5 C₃-10 carbocyclic residue substituted with 0-2 R^{4a}, and
5-10 membered heterocyclic system containing from 1-4
heteroatoms selected from the group consisting of N, O, and
S substituted with 0-2 R⁴, provided that B is other than
tetrazol-5-yl;

10

X is selected from C₁-4 alkylene, -C(O)-, -C(O)CR²R^{2a}-,
-CR²R^{2a}C(O), -C(O)O-, -OC(O)-, -S(O)_p-, -S(O)_pCR²R^{2a}-,
-CR²R^{2a}S(O)_p-, -S(O)₂NR²-, -NR²S(O)₂-, -C(O)NR²-,
-NR²C(O)-, -NR²-, -NR²CR²R^{2a}-, -CR²R^{2a}NR²-, O, -CR²R^{2a}O-,
15 and -OCR²R^{2a}-;

20 R⁴ is selected from OH, (CH₂)_rOR², halo, C₁-4 alkyl, CN, NO₂,
(CH₂)_rNR²R^{2a}, (CH₂)_rC(O)R², NR²C(O)R^{2a}, NR²C(O)NR²R^{2a},
CH(=NH)NH₂, NHC(=NH)NH₂, SO₂NR²R^{2a}, NR²SO₂NR²R^{2a}, NR²SO₂-
C₁-4 alkyl, S(O)_pR^{1a}, and CF₃;

25 R^{4a} is selected from OH, halo, C₁-4 alkyl, NO₂, (CH₂)_rNR²R^{2a},
(CH₂)_rC(O)R², NR²C(O)R^{2a}, NR²C(O)NR²R^{2a}, CH(=NH)NH₂,
NHC(=NH)NH₂, SO₂NR²R^{2a}, NR²SO₂NR²R^{2a}, NR²SO₂-C₁-4 alkyl,
S(O)_pR^{1a}, and CF₃; and,

n is selected from 0 and 1.

30 10. A compound according to Claim 9, wherein the
compound is of formula IIa:

IIa

or a stereoisomer or pharmaceutically acceptable salt form thereof, wherein;

5

R is selected from CO_2R^1 , COR^1 , OR^1 , $\text{CONR}^2\text{R}^{2a}$, $\text{S(O)}_p\text{R}^{1a}$, and $\text{S(O)}_p\text{NR}^2\text{R}^{2a}$;

R¹ and R^{1a} are independently selected from:
 10 C₁₋₄ alkyl substituted with 0-1 R³,
 C₃₋₆ carbocyclic residue substituted with 0-2 R⁴, and
 5-6 membered heterocyclic system containing from 1-4
 heteroatoms selected from the group consisting of N, O,
 and S substituted with 0-2 R⁴;

15

X is selected from C₁₋₄ alkylene, -C(O)-, -S(O)_p-, -NR²-, and O; and,

20

m is selected from 0 and 1.

25

11. A compound according to Claim 10, wherein;

R is selected from CO_2R^1 , COR^1 , OR^1 , and $\text{CONR}^2\text{R}^{2a}$;

R¹ and R^{1a} are independently selected from:

C₁₋₄ alkyl substituted with 0-1 R³, and

C₃₋₆ carbocyclic residue substituted with 0-2 R⁴; and,

30 R² and R^{2a} may be taken together to form a 5 or 6 membered ring substituted with 0-2 R⁴.

12. A compound according to Claim 11, wherein;

5 R¹ and R^{1a} are independently selected from C₁₋₄ alkyl substituted with 0-1 R³;

R³ is phenyl substituted with 0-2 R⁴; and,

10 Y is a C₃₋₁₀ carbocyclic residue substituted with 0-2 R⁴.

13. A compound according to Claim 12, wherein the compound or pharmaceutically acceptable salt form thereof is
15 selected from the group consisting of:

trans-1-(methylsulfonyl)-3-([2'-aminosulfonyl-[1,1']-biphenyl-4-yl)aminocarbonyl)-4-(3-amidinophenyl)pyrrolidine;

20 *trans*-1-(methylsulfonyl)-3-([2'-tert-butyldaminosulfonyl-[1,1']-biphenyl-4-yl)aminocarbonyl)-4-(3-amidinophenyl)pyrrolidine;

25 *cis*-1-(methylsulfonyl)-3-([2'-aminosulfonyl-[1,1']-biphenyl-4-yl)aminocarbonyl)-4-(3-amidinophenyl)pyrrolidine;

trans-1-(methylsulfonyl)-3-[(5-(2'-aminosulfonylphenyl-1-yl)pyridin-2-yl)aminocarbonyl]-4-(3-amidinophenyl)pyrrolidine;

30 *trans*-1-(methylsulfonyl)-3-[(5-(2'-tert-butylaminosulfonylphenyl-1-yl)pyridin-2-yl)aminocarbonyl]-4-(3-amidinophenyl)pyrrolidine;

35 1-(methylsulfonyl)-3-([2'-aminosulfonyl-[1,1']-biphenyl-4-yl)aminocarbonyl)-4-(3-amidinophenyl)-Δ³-pyrroline;

1-(benzyl)-3-([2'-aminosulfonyl-[1,1']-biphenyl-4-yl)aminocarbonyl)-4-(3-amidinophenyl)- Δ^3 -pyrroline;

5 trans-1-(methylsulfonyl)-3-([2'-aminosulfonyl-[1,1']-biphenyl-4-yl)methylcarbonyl)-4-(3-amidinophenyl)pyrrolidine.

10 14. A pharmaceutical composition, comprising: a pharmaceutically acceptable carrier and a therapeutically effective amount of a compound according to Claim 1 or a pharmaceutically acceptable salt thereof.

15 15. A pharmaceutical composition, comprising: a pharmaceutically acceptable carrier and a therapeutically effective amount of a compound according to Claim 2 or a pharmaceutically acceptable salt thereof.

20 16. A pharmaceutical composition, comprising: a pharmaceutically acceptable carrier and a therapeutically effective amount of a compound according to Claim 8 or a pharmaceutically acceptable salt thereof.

25 17. A method for treating or preventing a thromboembolic disorder, comprising: administering to a patient in need thereof a therapeutically effective amount of a compound according to Claim 1 or a pharmaceutically acceptable salt thereof.

30 18. A method for treating or preventing a thromboembolic disorder, comprising: administering to a patient in need thereof a therapeutically effective amount of a compound according to Claim 2 or a pharmaceutically acceptable salt thereof.

35 19. A method for treating or preventing a thromboembolic disorder, comprising: administering to a patient in need thereof a therapeutically effective amount

of a compound according to Claim 8 or a pharmaceutically acceptable salt thereof.

INTERNATIONAL SEARCH REPORT

International Application No

PCT/US 97/14222

CLASSIFICATION OF SUBJECT MATTER
 IPC 6 C07D207/16 A61K31/40 C07D207/48 C07D401/12 C07D261/02

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

IPC 6 C07D A61K

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category *	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
A	EP 0 659 743 A (HOECHST) 28 June 1995 see the whole document ---	1-19
A	US 5 463 071 A (HIMMELSBACH ET AL.) 31 October 1995 cited in the application see column 1-4 ---	1-19
A	EP 0 483 667 A (DR. KARL THOMAE) 6 May 1992 see the whole document & CA 2 054 850 A cited in the application -----	1-19

Further documents are listed in the continuation of box C.

Patent family members are listed in annex.

* Special categories of cited documents :

- "A" document defining the general state of the art which is not considered to be of particular relevance
- "E" earlier document but published on or after the international filing date
- "L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- "O" document referring to an oral disclosure, use, exhibition or other means
- "P" document published prior to the international filing date but later than the priority date claimed

- "T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- "X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- "Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- "8" document member of the same patent family
